Preface

This book provides an analyzed translation of part of Jam-yang-shay-pa Ngag-wang-tsön-drü’s *Decisive Analysis of the Middle*, also called *Great Exposition of the Middle*, which came to be the normative textbook for the study of Chandrakīrti’s Middle Way treatise in the Go-mang College of Dre-pung Monastery. Specifically, translated here is the section on the object of negation in general and the object of negation in the Middle Way Autonomy School in the *Decisive Analysis of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ’Treatise on the Middle’”: Treasury of Scripture and Reasoning, Thoroughly Illuminating the Profound Meaning [of Emptiness], Entrance for the Fortunate*, originally published in 1695. The author of this text, the Ge-lug polymath Jam-yang-shay-pa, is a prolific writer who composed the second set of monastic textbooks of Go-mang College.

In brief, the formation of monastic textbooks in Go-mang College can be divided into three phases. The first phase is the early growth of monastic education in Dre-pung Monastery and its subdivision, Go-mang College. Whether or not these units had set up formalized monastic curricula in the early 15th century C.E. is unclear. The second phase is comprised by the Old Monastic Textbooks of Go-mang College which were formulated when the oral lectures of Gung-ru Chö-kyi-jung-ne were turned into a formalized set of monastic textbooks in the early seventeenth century. Later, despite the destruction of his textbooks in Go-mang College and Ja-pù Monastery in Kham, they survived and were used until the advent of the New Monastic Textbooks by Jam-yang-shay-pa in the third phase in the very late seventeenth century, when they were replaced by his newly composed works.

THE AUTHOR OF THE *GREAT EXPOSITION OF THE MIDDLE*

Jam-yang-shay-pa\(^g\) was born in the Am-do Province of Tibet in 1648 east of the Blue Lake.\(^h\) Having studied the alphabet at age seven with his uncle, who was a monk, he mastered reading and writing and six years later became a novice monk. He went to Lhasa at age twenty-one to further his studies at the Go-mang College of Dre-pung Monastery; six years later he received full ordination and at twenty-nine entered the Tantric College of Lower Lhasa. From age thirty-three he spent two years in meditative retreat in a cave near Dre-pung Monastery. Perhaps it was at this time that Mañjushrī, also called Mañjughoṣha, appeared to him and smiled, due to which, according to Ngag-wang-leg-dan,\(^i\) he came to be called “One On Whom Mañjushrī (Jam-yang) Smiled (shay-pa).”

At age fifty-three he became abbot of Go-mang and at sixty-two in 1710 returned to Am-do Province where he founded a highly influential monastery at Tra-shi-khyil.\(^j\) Seven years later he founded a tantric college at the same place. He wrote prolifically on the full range of topics of a typical Tibetan polymath and, having received honors from the central Tibetan government and from the Chinese Emperor, died at the age of seventy-three or seventy-four in 1721/2.

Partly because of the close connection between Go-mang College and the Mongolian peoples stretching from the Caspian Sea through Siberia, who were predominantly Ge-lug-pa by this time, Jam-yang-shay-pa’s influence on the Ge-lug-pa order has been considerable. His life manifests a pattern typical of many influential Tibetan religious figures—child prodigy, learned scholar, disseminator of the religion, politician, priest to political personages, monastery leader, yogi, magician, popular teacher, and prolific writer.

TOPICS OF THE BOOK

Regarding the principal topic of this book, the object of negation in the view of emptiness according to the Middle Way School and especially its subdivision, the Autonomy School, Tsong-kha-pa Lo-sang-drag-pa, the founder of the Ge-lug tradition, puts great emphasis on the identification of object of negation—that is to say, what is rejected in the view of emptiness—since, according to him, without clearly identifying what veils suchness (or emptiness) one cannot achieve the view of emptiness:

With regard to delineating the absence of true existence in phenomena, if you do not understand well just what true establishment is, as well as how [phenomena] are apprehended as truly existent, the view of suchness will definitely go astray.

Moreover, the Ge-lug-pa presentation of the understanding of the object of negation in the Autonomy School is an important feature providing crucial justification for the division of the Middle Way School into the two subschools of the Autonomy School and the Consequence School. In the present work, Jam-yang-shay-pa defends and refines Tsong-kha-pa’s position on the object of negation, and also clarifies objections from scholars on particular points within the Ge-lug-pa tradition as well as from other traditions of Tibetan Buddhism.

This translation of Jam-yang-shay-pa’s text utilizes the UMA Debate Analysis Method, colorizing the author’s positions in blue and what he considers incorrect positions in red to help readers easily understand the content of debates. In this way I have reformatted Jam-yang-shay-pa’s Decisive Analysis of the Middle to clearly highlight the three fundamental aspects of Tibetan literary debate: a refutation of the philosophical positions of others with which the author does not agree (“Refuting Other Systems”), a constructive presentation of his own philosophical positions (“Our Own System”), and a refutation of potential objections that others might raise to his own philosophical positions (“Dispelling Objections to Our Own Position”).

Jam-yang-shay-pa’s presentation not only functions as an authoritative monastic text providing debate skills and strategy, but also is as an arena where historical figures criticize each other through virtual debates

---

k *dgag* bya, *pratishthya*.

l *tsong* kha pa bIo bzang grags pa, 1357-1419.

conducted in a formalized style, thereby making arguments promoting specific philosophical points.

**GENERAL SECTION ON THE OBJECT OF NEGATION**

The first part translated here is Jam-yang-shay-pa’s general section on what is refuted in the doctrine of emptiness in the Middle Way School. It consists of nine refutations in the subsection on Refuting Other Systems and two debates in the subsection on Dispelling Objections. As I show in list form below, analysis indicates that Jam-yang-shay-pa indirectly presents 71 points in Refuting Other Systems and 9 points in Dispelling Objections, whereas the number of points that he presents in the subsection on Our Own System is remarkably small, only 14. Thus, all three sections need to be gleaned to understand the philosophical structure being presented about the object of negation.

In addition to this discrepancy in numbers, there is also a difference in format. Philosophical points are only indirectly presented in Refuting Other Systems and Dispelling Objections, since they are embedded in debate dialogs, requiring ferreting out the author’s own position usually by extrapolating the opposite of the notion being voiced, while the part presenting Our Own System consists of direct presentation of philosophical positions written in expository prose. As presented below, these points:

1. justify the necessity of identifying the object of negation
2. introduce the two different ways of discerning the two types of objects of negation
3. provide the criteria and subdivisions of the objects to be negated by correct reasonings
4. clarify easily confused logical terms.

When we compare these philosophical points on the identification of object of negation in this way, the difference between indirect and direct presentations is obvious. This characteristic of the genre of Decisive Analysis within monastic textbook literature contrasts sharply with the style of other Tibetan scholastic thinking, which focuses on expository prose to provide detail on philosophical systems. The style of Decisive Analysis has a twofold explicit pedagogical function and goal indicated clearly in its usage of actual debate format—it teaches monastics how to debate, and

---

\[\text{\textsuperscript{n} mtha’ dpyod} \]

The meaning of mtha’ dpyod pa is variously described as analyzing the limits of entailment (khyab mtha’ dpyad pa), “final analysis” (mtha’ dpyad pa), and “decisive analysis” (mtha’ gcad pa).
it also massively communicates specific philosophical points.

In this way, Jam-yang-shay-pa’s *Decisive Analysis of the Middle* aims to teach skills and strategies for actual debate practice in the debate courtyard while educating students about crucial philosophical points in the process. Whereas the “Our Own System” section may be relatively modest in extent, when looked at as a whole, all three sections—and their 94 points—are tightly marshaled to argue for specific philosophical positions, all along teaching students how one goes about debating them. (See the chart on the next page.)
Detailing the 71 individual points in Refuting Other Systems, the 14 points in Our Own System, and the 9 points in Dispelling Objections to Our Own Position (the beginning of each debate is in bold)

<tr>
<td><strong>1. First Debate</strong></td>
</tr>
<tr>
<td>If one has not identified the object of negation, the non-dawning of any object to one’s awareness and not thinking anything is not to see, not to realize the mode of subsistence.</td>
</tr>
<tr>
<td>2. It cannot be claimed that the mere non-dawning of all the stable and the moving, that is to say, the inanimate and the animate, to your mind is the meaning of seeing the mode of subsistence of those objects because it is not that you realize the mode of subsistence of all the stable and the moving in worldly realms that you yourself do not know.</td>
</tr>
<tr>
<td>3. Aspects of all the stable and the moving in worldly realms do not dawn to your awareness.</td>
</tr>
<tr>
<td>4. The non-dawning of those is not the meaning of seeing the mode of subsistence of these objects.</td>
</tr>
<tr>
<td>5. Whatever is a non-view ignorance (lta min gyi ma rig pa) necessarily does not realize emptiness!</td>
</tr>
<tr>
<td>6. When the aspect of emptiness dawns to an awareness, the aspect of the negative of its object of negation dawns.</td>
</tr>
<tr>
<td>7. The non-dawning of anything to an awareness is not a realization of emptiness.</td>
</tr>
<tr>
<td>8. When the aspect of emptiness dawns, the factor that is a negative of the object of negation—true establishment—dawns.</td>
</tr>
<tr>
<td>9. Emptiness is a non-affirming negative that is a negative of true establishment.</td>
</tr>
<tr>
<td>10. Since emptiness is a non-affirming negative that is a negative of true establishment, the factor that is the negative of the object of negation—true establishment—must dawn when the aspect of emptiness dawns.</td>
</tr>
<tr>
<td>11. When meaning-generalities of non-affirming negatives dawn in dependence upon explicitly refuting their objects of negation, it is necessary that another phenomenon is not projected explicitly or implicitly.</td>

| 31   | **Fourth Debate**  
The view in the Diverged Afars mental continuum that former and later births are natureless is not the Middle Way view. |
| 32   | The naturelessness of former and later births is the final mode of subsistence. |
| 33   | The view in the mental continuum of Proponents of the Great Exposition that a Buddha’s enjoyment body is natureless is not the Middle Way view. |
| 34 | The naturelessness of an enjoyment body is the final mode of subsistence. |
| 35 | Likewise, know how to apply this mode of refutation to the Mind-Only Proponents’ view that the imputational nature is not established by way of its own character. |
| 36 | **Fifth Debate**  
Such a view in the Diverged Afars’ continuum that former and later births are natureless is not a factually concordant conceptual consciousness. |
| 37 | The view in the continuum of a Proponent of the Great Exposition that a Buddha’s enjoyment body is natureless is not a factually concordant conceptual consciousness. |
| 38 | **Sixth Debate**  
The statement by Tsong-kha-pa:  
> When, in that way, you have identified well the apprehension of true existence, you will understand that there are many apprehensions that are not the two apprehensions of self, whereby all wrong ideas asserting that reasonings analyzing suchness refute all objects apprehended by conceptuality will be overcome. 
> is logically feasible. |
| 39 | The thought of the Perfection of Wisdom Sūtras is not to be explained as being that howsoever forms are apprehended—as the four extremes of being empty or not empty or as the middle free from them—are apprehensions of extremes and hence have to be refuted. |
| 40 | Tsong-kha-pa, having solely refuted truth, that is, true establishment (*bden par grub pa*), asserts that forms abide in the middle. |
| 41 | The distinction should be made that reasoning analyzing the ultimate refutes inherent existence but does not refute forms and so forth that are illusory-like dependent-arisings. |
| 42 | Reasoning does not refute all whatsoever objects. |
| 42 | Go-ram-pa contradicts many sūtras and treatises such as Chandrakīrti’s *Clear Words* which says:  
> We are not propounding that “Action, doer, effect, and so forth do not exist.”  
Why?  
We posit that inherent existence does not exist. |
| 43 | **Seventh Debate**  
Refutation of objects imputed only by Forders and Proponents of Tenets does not harm the apprehension of inherent existence that has operated beginninglessly. |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>44</td>
<td>Even among innate awarenesses there are apprehensions of permanence and of former and later phenomena as one.</td>
</tr>
<tr>
<td>45</td>
<td>There is something eliminated by “only” in the statement that refutation of objects imputed <em>only</em> by Forders and Proponents of Tenets does not harm the apprehension of inherent existence that has operated beginninglessly: namely, what is misapprehended by innate misapprehensions.</td>
</tr>
<tr>
<td>46</td>
<td>Whatever is an apprehension of permanence is not necessarily an apprehension in accordance with the Forders’ superimposition that the self is permanent.</td>
</tr>
<tr>
<td>47</td>
<td>An innate apprehension of permanence does not apprehend in that way, that is to say, in accordance with the Forders’ superimposition that the self is permanent.</td>
</tr>
<tr>
<td>48</td>
<td>In the continuums of those who are not involved in tenet systems such as animals and so forth, there is no apprehension that the self is permanent in the sense of not being produced from causes and conditions.</td>
</tr>
<tr>
<td>49</td>
<td>In the continuums of those who are not involved in tenet systems such as animals and so forth, there is apprehension that the self is permanent in the sense of not disintegrating until death.</td>
</tr>
<tr>
<td>50</td>
<td>Since the Proponents of the Great Exposition, the Proponents of Sūtra, and so forth have not entered the Middle Way view, they cannot harm the conceived object of the apprehension of true existence.</td>
</tr>
<tr>
<td>51</td>
<td>The thesis that Tsong-kha-pa’s statement—“Refutation of objects imputed only by Forders and Proponents of Tenets does not harm the apprehension of inherent existence that has operated beginninglessly”—is not logically feasible is not logically feasible.</td>
</tr>
</tbody>
</table>
| 52 | **Eighth Debate**  
There are two objects of negation by correct reasoning: existent and nonexistent. |
| 53 | Object of negation by a correct reasoning and object of negation that is the opposite of the probandum of a correct sign are not equivalent. |
| 54 | The apprehension of true existence is an object of negation by a correct reasoning. |
| 55 | The apprehension of true existence is not an object of negation by a correct sign proving the absence of true existence. |
| 56 | The apprehension of true existence is not a probandum of a correct sign. |
| 57 | The apprehension of true existence is an object of negation by a correct reasoning proving something as not truly existent. |
| 58 | Reasoning (rigs pa) and logicality (’thad pa) are equivalent. |
| 59 | Both an apprehension of true existence as well as its conceived object—that is, true establishment—must be posited as objects of negation by a correct reasoning, which is also called a correct logicality. |
| 60 | Since the apprehension of true existence is not logically feasible in accordance with its apprehension, the apprehension of true existence comes to be an object of negation by a correct logicality. |
| 61 | The apprehension of true existence is existent. |
| 62 | You cannot negate by means of a correct sign something that exists. |
| 63 | The predicate of the probandum in a proof of something is not to be confused with the probandum in the proof of that something since a probandum has both a subject and a predicate. |
| 64 | **Ninth Debate**  
**The object of negation that is the opposite of a probandum of a correct sign necessarily does not exist.** |
| 65 | Nonexistence of sprout is not the object of negation that is the opposite of the probandum of a correct sign proving that a sprout exists. |
| 66 | That a sprout exists is the probandum in the proof that a sprout exists. |
| 67 | That a sprout exists is the probandum in the proof that a sprout exists does not entail that the nonexistence of a sprout is the object of negation that is the opposite of the probandum of a correct sign proving that a sprout exists. |
| 68 | That a sprout is nonexistent is posited as the opposite of the probandum in the proof that a sprout exists. |
| 69 | Existence of self is not the object of negation of the probandum in the proof that the aggregates are selfless by the sign, dependent-arising. |
Your mode of assertion with regard to a sprout—that is, that the nonexistence of sprout is the object of negation that is the opposite of the probandum of a correct sign proving that a sprout exists—is not logically feasible.

It is not reasonable to refute even the substratum.

### JAM-YANG-SHAY-PA’S 14 POINTS IN OUR OWN SYSTEM

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>In order to ascertain emptiness it is necessary initially to identify the object of negation because if the object of negation is not identified, the emptiness that negates the object of negation is not identified.</td>
</tr>
<tr>
<td>2</td>
<td>In general, there are two types of objects of negation: objects of negation by the path and objects of negation by reasoning.</td>
</tr>
<tr>
<td>3</td>
<td>Among them, within the objects of negation by the path, there must be an existent because if there is not an existent object of negation by the path, all sentient beings would be self-released, and the hardship of practicing the path would be meaningless.</td>
</tr>
<tr>
<td>4</td>
<td>With respect to objects of negation by correct reasoning, two types are taken as objects of negation—wrong apprehensions and the objects apprehended by them.</td>
</tr>
<tr>
<td>5</td>
<td>It is like, for example, the fact that with regard to objects of negation by the reasoning of dependence, both (1) the apprehension of a thing as not depending on causes and conditions and (2) its object, that is, a thing’s not depending on causes and conditions, are not logically feasible and not reasonable, and therefore they are taken as objects of negation.</td>
</tr>
<tr>
<td>6</td>
<td>Although there are four types of correct reasoning—the reasonings of dependence, of logicality, of the performance of function, and of nature—when summarized, they are included within two types, because these four are included into the reasoning analyzing the ultimate and the reasoning analyzing conventions.</td>
</tr>
<tr>
<td>7</td>
<td>Logically feasible (ṭhād pa), suitable (rung ba), and reasonable (rigs pa) are equivalent because Vasubandhu’s Principles of Explanation (rnam bshad pa’i rigs pa, vyākyāyukti) says such.</td>
</tr>
<tr>
<td>8</td>
<td>The rigs pa of ṭhād rigs (ṭhād pa dang rigs pa, logicality and reasoning) and the rig pa of blo rig (blo dang rig pa, awareness and knowledge) are not equivalent.</td>
</tr>
</tbody>
</table>
In Tibetan the presence and absence of the suffix *sa* in *rigs pa* and *rig pa* differ, and in Sanskrit the terms also differ since *yoṣir* is used for the *rigs pa* of 'thad *rigs* (logicality and reasoning) and *vidyā* is used for the *rig pa* of *blo rig* (awareness and knowledge).

The opposite of logicality is taken as the object of negation by reasoning.

When comparing the high speech (*gsung rab*, *pravacana*) of Tsong-kha-pa and his spiritual sons Khay-drub and Gyal-tshab, it turns out that the four non-reasonables (non-reasonable with regard to dependence, non-reasonable with regard to logicality, non-reasonable with regard to the performance of function, and non-reasonable with regard to nature) which are the opposites of the four reasonings (the reasoning of dependence, of logicality, of the performance of function, and of nature) are taken as objects of negation.

Correct reasoning (*rigs pa yang dag*) and correct sign (*rtags yang dag*) are not equivalent.

Because the objects of negation by a correct reasoning and a correct sign are not equivalent, correct reasoning (*rigs pa yang dag*) and correct sign (*rtags yang dag*) are not equivalent, and the objects of negation by a correct reasoning and a correct sign are also not equivalent.

In accordance with statements by the lords of scholars Gung-ru Chö-kyi-jung-nay and Tag-lung-drag-pa Lo-drö-gya-tsho, the objects of negation by correct signs are nonexistents because there are manifold scriptures and reasonings.

<table>
<thead>

<th>JAM-YANG-SHAY-PA’S 9 POINTS IN DISPELLING OBJECTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Tenth Debate</strong></td>
</tr>
<tr>
<td>The apprehension of something as truly existent by an apprehension of true existence is not logically feasible.</td>
</tr>
</tbody>
</table>

---

\( ^{\circ} \) The two editions of *dbu ma'i mtha' dpyod* read *yoṣir*. See 'jam dbyangs bzhad pa, *dbu ma 'jug pa'i mtha' dpyod lung rigs gter mdzod zab don kun gsal gyi dkar chag* in the *Collected Works of Jam-dbyangs-bzhad-pa'i-rdo-rje: Reproduced from prints from Bkra-shis-'khyil Blocks*, vol. 9 (South India, India: s.n., 1995). 186a.3; 'jam dbyangs bzhad pa, *dbu ma 'jug pa'i mtha' dpyod lung rigs gter mdzod* (Beijing, China: pe cin nyug hran shin ’gyig par khang, 2004). 190.3. I was not able to find the corresponding Sanskrit term for *yoṣir*. It might be *yukti*. 
The apprehension of something as truly existent by a consciousness apprehending true existence is an object of negation by a correct reasoning; however, it is not that the apprehension of something as truly existent by a consciousness apprehending true existence does not exist.

The apprehending of something as truly existent by a consciousness apprehending true existence is not logically feasible, but the apprehension of something as truly existent by a consciousness apprehending true existence does exist.

The Outsiders’ reasonings proving the existence of a self of persons and their modes of explanation each exist.

The Outsiders’ reasonings proving the existence of a self of persons and their modes of explanations are not logically feasible.

Eleventh Debate

The apprehension of true existence is not an object of negation by a sign analyzing the ultimate.

The apprehension of true existence is an object of negation by an inference that is a rational consciousness analyzing the ultimate.

There is utterly no entailment that whatever is an object of negation by an inference that is a rational consciousness analyzing the ultimate is necessarily an object of negation by a sign analyzing the ultimate.

The wisdom realizing the absence of true existence is not a probandum of a correct sign proving the absence of true existence.

As can be seen from the table, students learn from the two sections on Refuting Other Systems and Dispelling Objections many more of Jamyang-shay-pa’s positions than are in the presentation of his own system.

This layout has the virtue of disentangling these components from the complex back and forth of the original text. Having done so, not only can we clearly see what those points are, but we can also appreciate the relative extent of each of the three components, thereby glimpsing what such debate texts strive to accomplish—expertise in the method of debate within acquisition of philosophical points, and, perhaps above all, an increased capacity to think logically.
THE OBJECT OF NEGATION IN THE AUTONOMY SCHOOL

The second part Jam-yang-shay-pa’s Decisive Analysis of the Middle translated in this book concerns the object of negation in the Middle Way Autonomy School. This also is divided into three sections—Refuting Others’ Mistakes, Presenting Our Own System, and Dispelling Objections to Our Own System.

Refuting others’ mistakes about the object of negation in the Autonomy School

The sixteen refutations of others’ mistakes center around four topics:

1. explaining and defending Tsong-kha-pa’s identification of the innate apprehension of true existence
2. analyzing whether true existence appears to sense consciousnesses according to the Autonomy School
3. determining the meaning of “merely imputed by conceptuality” (rtog pas btags tsam) and “only imputed by names” (ming gis btags tsam) according to the Autonomy School
4. examining abstruse and central points regarding the reasoning of the lack of being one and many, the favorite reasoning of the Autonomy School.

1. Explaining and defending Tsong-kha-pa’s identification of the innate apprehension of true existence (debates 1-4)

In the main part of this section, Jam-yang-shay-pa explains that Tsong-kha-pa’s identification of the innate apprehension of true existence stems from the statement in the Perfection of Wisdom Sūtras that all phenomena, including emptinesses, only conventionally exist and his extrapolation of true existence or ultimate existence as the opposite of that. Since the emptiness of form, for instance, is realized by an analytical consciousness searching for form, this analytical consciousness\(^p\) cannot be the “ultimate” in the term “ultimately exist” when the Perfection of Wisdom Sūtras say that form does not ultimately exist. For, because the emptiness of form

\(^p\) Also called a “rational consciousness” or “reasoning consciousness.”
does exist in the face of, or in the perspective of, such an analytical consciousness, the emptiness of form would absurdly ultimately exist. Tsong-kha-pa concludes that, rather than this, “ultimate” in the term “ultimately exist” when the Perfection of Wisdom Sūtras say that “form does not ultimately exist,” must mean something else.

Tsong-kha-pa admits that when Proponents of the Middle Way Autonomy School debate about true existence or ultimate existence, they mostly debate about the former sort of ultimate, but he calls this the ultimate existence, or true existence, in terms of the intellectually imbued apprehension of ultimate existence, or true existence, and declares that it is not the ultimate or true existence in terms of the innate apprehension of ultimate true existence simply because it cannot fit the description in the Perfection of Wisdom Sūtras. The problem is to find such a description in the literature of an Indian Proponent of the Middle Way Autonomy School. Tsong-kha-pa finds such a statement in Kamalashīla’s *Illumination of the Middle* which, through considerable creative adjustment, he turns into just what is needed. In brief, these modifications allow Tsong-kha-pa to hold that in this context:

- ultimate means “its own uncommon mode of abiding without being posited through the force of appearing to a non-defective awareness” (*blo gnod med la snang ba’i dbang gis bzhag pa ma yin par rang gi mthun mong ma yin pa’i sdod lugs*), and
- ultimately established means “established by way of its own uncommon mode of abiding without being posited through the force of appearing to a non-defective awareness” (*blo gnod med la snang ba’i dbang gis bzhag pa ma yin par rang gi mthun mong ma yin pa’i sdod lugs kyi ngos nas grub pa*).

Tsong-kha-pa is adamant that Kamalashīla’s *Illumination of the Middle* is the only clear text in the Autonomy School to identify the object of negation in terms of the innate apprehension of true existence. However, following Tsong-kha-pa’s pattern of research, two of his followers take issue with his claim that Kamalashīla’s *Illumination of the Middle* is the only Autonomy text to identify the object of negation in terms of the innate apprehension of true existence. Specifically, Jay-tsün Chö-kyi-gyal-tshan of the Jay College of Se-ra Monastery and Gung-ru Chö-jung, the author of the old textbooks of Go-mang College, claim to have another such identification, this being two lines in Jñānagarbha’s *Differentiation of the Two Truths*.

---

* rje btsun chos kyi rgyal mtshan, 1469-1544/1546.
Jay-tsün Chö-kyi-gyal-tshan says that these lines very clearly identify the innate apprehension of true existence, while Gung-ru Chö-jung asserts that it explicitly identifies it, the latter perhaps avoiding the word “clearly” to pretend not to contradict Tsong-kha-pa. Jam-yang-shay-pa, while mentioning neither by name, cogently refutes them by referring to the preceding six lines in Jñānagarbha’s text itself that undeniably reveal that he is speaking about the two truths, conventional and ultimate, and hence not about conventional and ultimate establishment. Jam-yang-shay-pa then backs this up with references to Jñānagarbha’s Auto-commentary and Shāntarakṣhita’s Commentarial Explanation of (Jñānagarbha’s) “Differentiation of the Two Truths.” It is easy to conclude that Jam-yang-shay-pa, by finding this mistake in Jay-tsün Chö-kyi-gyal-tshan’s and Gung-ru Chö-jung’s expositions, cogently defends Tsong-kha-pa’s position on the object of negation in terms of innate apprehension of true existence.

2. Analyzing whether true existence appears to sense consciousnesses according to the Autonomy School (debate 5)

Given that Tsong-kha-pa says:

Jñānagarbha’s Auto-commentary on “Differentiation of the Two Truths” explains that true [existence]—the object of negation—does not appear to sense consciousnesses, and it is the same here [in Kamalashīla’s Illumination of the Middle].

it is astounding that Jam-yang-shay-pa, contrary to all the other major Gelug-pa textbook authors, holds that true establishment in terms of an innate apprehension of true establishment appears to sense consciousnesses. He explains Tsong-kha-pa’s statement away as meaning that true establishment in terms of an intellectually imbued apprehension of true establishment does not appear to sense consciousnesses. This is a highly creative, critical, and provocative move on Jam-yang-shay-pa’s part, given that if Tsong-kha-pa meant to say this, he had plenty of opportunity to do so but did not. Nevertheless, Jam-yang-shay-pa’s re-reading fits in with Tsong-kha-pa’s positions that in the Mind-Only School and in the Consequence School the object of negation appears to sense consciousnesses.
3. Determining the meaning of “merely imputed by conceptuality” (rtog pas btags tsam) and “only imputed by names” (ming gis btags tsam) according to the Autonomy School (debates 6-8)

In brief, once Autonomists assert that all phenomena are established from their own side, phenomena cannot be merely imputed by conceptuality. Unlike the Proponents of Mind-Only, the Autonomists assert that the term “only (tsam)” in “only imputed by names” (ming gis btags tsam) eliminates the two, “own-character” and “establishment from its own side.”

4. Examining abstruse and central points regarding the reasoning of the lack of being one and many (debates 9-16)

Jam-yang-shay-pa’s Decisive Analysis of the Middle does not give a general introduction to the reasoning of the lack of being one or many and, instead, jumps right into a series of sometimes peripheral and sometimes central points concerning the reasoning. Therefore, let us turn to Jam-yang-shay-pa’s Great Exposition of Tenets, published in 1699 four years after the Great Exposition of the Middle, for a general introduction to the reasoning of the lack of being one or many. There Jam-yang-shay-pa says:

> What are the main reasonings refuting true establishment? Except for several reasons in which dependent-arising and existence are stated as signs, true establishment is refuted in dependence on signs that are non-observations of a related object. For, Shāntarakṣhita’s Ornament for the Middle sets forth the lack of being one

---

Explanation of “Tenets”: Sun of the Land of Samantabhadra Brilliantly Illuminating All of Our Own and Others’ Tenets and the Meaning of the Profound [Emptiness], Ocean of Scripture and Reasoning Fulfilling All Hopes of All Beings (grub mha’ chen mo / grub mtha’i rnam bshad rang gzhan grub mtha’ kun dang zab don mchog tu gsal ba kun bzang zhung gi nyi ma lung rigs rgya mtsho skye dgu’i re ba kun skang).

2. For an excellent extensive presentation of the reasoning of the lack of being one or many, see Lopez, A Study of Svātāntarikā, 167-191 and 356-379.

3. Hopkins, Maps of the Profound, 782-785 passim; Taipei, 520.15ff.
and many in dependence on statements of the lack of being one and many by the Descent into Laṅkā Sūtra, the Meeting of Father and Son Sūtra, and the Superior [Nāgārjuna] and his spiritual son [Āryadeva]. The following are quoted; the Descent into Laṅkā Sūtra says:

    Just as although forms devoid
    Of oneness and otherness
    Appear in a mirror but do not exist,
    So is the inherent nature of things.

and the Meeting of Father and Son Sūtra says:

    Just as reflections
    Without inherent existence
    Appear in a very clean mirror,
    Understand phenomena [such as] trees.

and so forth, and Āryadeva’s Four Hundred Stanzas on the Yogic Deeds of Bodhisattvas says:

    Things that are investigated
    Do not have oneness.
    In those in which oneness does not exist,
    Manyness also does not exist.

Dharmakīrti’s Commentary on (Dignāga’s) “Compilation of Prime Cognition” says:

    Things upon definite investigation
    Are without thingness [that is, true establishment] in reality,
    For they do not have a nature
    Of oneness or manyness.

and so forth.

    Also, Kamalashīla’s Illumination of the Middle sets forth the vajra nodes, the refutation of production of the existent and the

---

a Hopkins reports: Kensur Lekden said that this reasoning is called rdo rje gzegs ma because each of the four reasons is capable of overcoming a conception of inherent existence just as a piece of diamond has the hardness and so forth of a diamond. From this viewpoint, gzegs ma (*kanā) would mean “piece,” and hence “fragment” (“sliver” no longer strikes me as appropriate since it suggests a weak, thin piece, whereas these are fragments). However, according to Apte’s dictionary, the Sanskrit term also means “facet”; this would seem to be most appropriate when speaking of diamonds (and more appropriate to the meaning
non-existent, the refutation of production from the four alterna-
tives, and the lack of being one or many; it also explains depend-
ent-arising, which is a reason that is an observation of a contradic-
tory object. Since all phenomena—compounded and uncom-
pounded—are delineated by way of the lack of being one or many,
that a certain [scholar] considers part and whole only with regard
to effective things is a sign of weak intelligence.

Ngag-wang-pal-dan’s word commentary on Jam-yang-shay-pa’s root text
states the reasoning succinctly: a

To state an example: Because of lacking being a truly established
one or many, forms and so forth do not truly exist, as is the case,
for example, with the reflection of a face in a mirror.

To establish the forward-entailment and counter-entailment:
Whatever is truly established is limited to the two, truly existent
one or many.

To prove the presence of the reason in the subject: It is not a
truly established one because of having parts; it is not a truly es-
tablished many because a truly established one does not exist.

To return to Jam-yang-shay-pa’s Great Exposition of Tenets: b

These things do not truly exist because in reality they lack a nature
of being one or many, as is the case, for example, with a reflection.

Whatever truly exists are limited to being either a truly estab-
lished one or a truly established many, and also whatever are not
established as either of those is necessarily without true existence
because those are contradictory in the sense of mutual exclusion;c
it is like the fact, for example, that whatever exists is necessarily
either one or many…

The presence of the reason in the subject is also established:
It is not a truly existent one because of having parts, and it is not

since each of the four reasons alone actually is not capable of refuting inherent existence);
however, none of my Tibetan sources, oral or written, has explained it this way. The oral
traditions that I have contacted are by no means always accurate; nevertheless, when put
together, the various oral strains are quite full and no Tibetan scholar to date has given this
explanation. One Tibetan scholar said that gzegs ma refers to the nodes, or points, of a
vajra; this accords with the sense of these reasonings being instruments that break apart
mountains of wrong view. Thus, for the time being, I am translating this as “vajra nodes.”

a  Hopkins, Maps of the Profound, 784.
b  Ibid.; Taipei, 521.9.
c  phan tshun spangs ’gal.
a truly existent many because a truly existent one does not exist.

Ngag-wang-pal-dan’s Annotations turns to Tsong-kha-pa for more detail:

In brief, Tsong-kha-pa’s *The Essence of Eloquence* says:

With respect to the final boundary for demonstrating to another a composite of contradictions, they refute ultimately established phenomena:

- upon demonstrating that, among whatever is asserted by our own and others’ schools, there does not occur anything partless that does not have many parts such as a temporal series, parts of an object, aspects of an object of consciousness, and so forth,
- they demonstrate that, if something is established as possessing many parts, although there is no contradiction among conventional objects for one phenomenon to exist as an essence [or entity] of many parts, within being ultimately established there is the damage that:
  1. if the two—parts and parts-possessor [whole]—are different entities, they would be unrelated
  2. if they are one entity, the parts would become one or the whole would become many.

Here in the *Great Exposition of the Middle* Jam-yang-shay-pa considers such topics as whether this reasoning should be called “lack of being either one truth or many truths” (it seems it should not) and whether this reasoning is a correct sign proving only a convention (it should because the reason itself contains the meaning of emptiness).

Along the way, Jam-yang-shay-pa points out that the Consequentialists assert space’s establishment from its own side as the measure of space’s establishment as its own mode of subsistence, and that nobody from the Autonomists on down has such a subtle assertion, but that this does not mean that the Consequentialists hold that the proponents of those other schools do not ascertain with valid cognition that the mode of subsistence is nonproduced. For instance, for non-Consequentialists to realize that a pot is an effective thing, their realization does not have to be qualified by the absence of inherent existence. Otherwise, it would absurdly follow that no phenomenon is established with valid cognition by anyone but the Consequentialists!

In the quoted material above, the example used in the reasoning of the

---

lack of being one and many is a reflection in a mirror; in other places the example is a magician’s illusion. In India, pebbles or sticks are used as bases for a magician’s conjuring; the magician recites a mantra as a spell, and the pebbles or sticks appear as horses and elephants. Jam-yang-shay-pa makes it clear that the message of the example is not that just as although magical illusions appear as horses and elephants, they are empty of those, so although phenomena such as a pot and so forth appear as a pot and so forth, they are empty of being a pot and so forth. He reports that some have taken this to be meaning of self-emptiness, but he says it is not, for if it were the proper meaning of self-emptiness, nothing would be itself, in which case even self-emptiness would not be self-emptiness! Rather, the actual message of the example of a magician’s illusion is that just as magical illusions appear as horses and elephants but are empty of those, so phenomena such as a pot and so forth appear to be inherently or truly existent but are empty of that status of inherent existence. This is the meaning of self-emptiness, not that objects are empty of themselves.

The section of sixteen refutations of others’ mistakes ends with clarifying that all phenomena have parts; it is not that just physical, material phenomena have parts, and not that just what is compounded from causes and conditions such as consciousnesses have parts, but even uncompounded space, nirvāṇa, and so forth have parts. This move allows the reasoning of the lack of being one and many to apply to all phenomena, the impermanent and the permanent.

Presenting our own system on the object of negation in the Autonomy School

Jam-yang-shay-pa’s presentation of his own system centers on how Tsong-kha-pa creatively expands on a statement in Kamalashīla’s *Illumination of the Middle* so it clearly identifies the object of negation, true existence or ultimate existence, in terms of the innate apprehension of true existence. As mentioned briefly above, Tsong-kha-pa does this through finding a supposedly clear exposition in Kamalashīla’s text of conventional existence and then drawing out its counterpart, ultimate existence. Let us look into this.

In this passage in the *Illumination of the Middle* Kamalashīla cites a stanza from the *Descent into Lankā Sūtra*:a

The production of things [exists] conventionally (*kun rdzob tu*,

---

*a dbu ma snang ba, madhyakāloka; sde dge 3887, dbu ma, vol. sa, 228a.7-228b.3.*
Ultimately it lacks inherent existence.
That consciousness mistaken with regard to the lack of inherent existence
Is asserted as the obscurer of reality (yang dag kun rdzob, satyam samvṛti).

The problem for Tsong-kha-pa is that the word for “conventional” appears twice in the stanza, in the first line as kun rdzob tu, samvṛtyā and in the fourth line as yang dag kun rdzob, satyam samvṛti. The last two lines speak about the ignorance that—due to not understanding the absence of inherent existence—obscures reality; as Tsong-kha-pa cogently describes it, this is a consciousness that is “an apprehender of true existence” (bden ’dzin). Given that this is the meaning of samvṛti in the fourth line, the intuitive reading of the first line would seem to be that “the production of things exists obscurationally,” that is to say, for such an ignorant consciousness.

However, Tsong-kha-pa attempts to justify a different meaning for samvṛti in the first line by citing Kamalashila’s commentary:

Therefore, all entities of false things—[existing] through the power of their [that is, sentient beings’] mentations—are said “only to exist conventionally.”

Tsong-kha-pa takes “mentations” (bsam pa) widely as both conceptual consciousnesses and nonconceptual consciousnesses:

The “mentations” of those living beings are not just conceptual consciousnesses but also are to be taken as non-conceptual consciousnesses.

False things—that is to say, that do not exist ultimately but are posited as existing through the force of those two [conceptual and non-conceptual consciousnesses]—exist only conventionally. This is the meaning of the statement in the [Descent into Lankā Sūtra], “The production of things [exists] conventionally (kun rdzob tu, samvṛtyā).” Moreover, this does not mean that [such falsities] exist conventionally in the sense of existing for a samvṛti (kun rdzob) that is an apprehender of true existence [as it does in the final line of the same passage].

The hinge of Tsong-kha-pa’s argument is the meaning of Kamalashila’s term “mentations,” which he reads not as the ignorance obscuring reality but as conceptual and non-conceptual consciousnesses in the face of which

---

a Or “thoughts” as Hopkins translates the term.
objects are posited as existing. Tsong-kha-pa does not cite it, but just three sentences later, Kamalashīla himself offers another explanation:a

Also, with regard to the proposition that “[All things are] conventionally produced” and so forth [that is to say, “and are not ultimately produced”], it is asserted that the meaning is this:

Because the aforementioned mistaken entity—the obscurer (kun rdzob, saṃvṛti)—displays all things as if produced even though in reality they are not produced, it is said that due to the power of [all living beings’] mentalizations things are conventionally produced.

Therefore, the Buddha [in the Descent into Laṅkā Śūtra] says, “The production of things [exists] conventionally (kun rdzob tu, saṃvṛtyā).”

Has Tsong-kha-pa found the key for unlocking the meaning of this passage? According to his reading, one type of saṃvṛti, obscurative ignorance, displays phenomena as if ultimately produced, but another type of saṃvṛti, conceptual consciousnesses and nonconceptual consciousnesses, are the valid means of positing the conventional existence of phenomena. Or is it that Tsong-kha-pa’s identification of the meaning of kun rdzob tu (saṃvṛtyā) in the first line of the passage in the Descent into Laṅkā Śūtra as meaning “conventionally” based on Kamalashīla’s mention of “mentations” differs from Kamalashīla’s thought in this presentation of the meaning of the same with the result that the passage from the Descent into Laṅkā Śūtra should read:

---

a Illumination of the Middle, 229a.7-229b.1.
The production of things [exists] obscurationally (kun rdzob tu, samvyā); Ultimately it lacks inherent existence. That [consciousness] mistaken with regard to the lack of inherent existence Is asserted as the obscurer of reality (yang dag kun rdzob, satyam samvyā). If read this way, Kamalashīla would be saying that things exist and are produced only in the face of the ignorance superimposing true existence. Evidence suggesting this very reading is found in Kamalashīla’s Difficult Points in (Shāntarakṣhita’s) “Ornament for the Middle”a where he comments on stanza 63ab in Shāntarakṣhita’s text:b

Therefore, these things hold
Only the character of the conventional.

Expanding on the meaning of the stanza, Kamalashīla says:

[Someone] thinks: If these things ultimately do not have an inherent nature, well then implicitly what is their character?
[Answer: Shāntarakṣhita] states “Therefore, these things…” and so forth. Since mistaken aware nesses obstruct the suchness of things, all mistaken awarenesses are obscurers. Because of abid ing as entities imputed through the power of mentations that are mistaken awarenesses, those that exist for these [mistaken mentations] are obscurationals.

a dbu ma rgyan gyi dka’ ‘grel.
b For the Tibetan text, see Śāntarakṣita and Kamalaśīla, Madhyamakālaṃkāra of Śāntarakṣita: With His Own Commentary or Vṛtti and with the Subcommentary or Pañjikā of Kamalaśīla, critically ed. by Ichigō Masamichi (Kyoto, Japan: Kyoto Sangyo University, 1985), 196-197.
Here, Kamalashīla explicitly specifies “mentations that are mistaken 
awarenesses,” leaving no room for identifying them as “nonconceptual 
and conceptual awarenesses” as Tsong-kha-pa does, since these are taken 
to be “obscurers,” the ignorant consciousnesses that due to not understand-
the lack of inherent existence obscure reality—that is, consciousnesses 
apprehending true existence (bden ’dzin). Still, forced to take Kamal-
ashīla’s own explanation this way, we are left with the dilemma that for 
Kamalashīla the conventionally existent merely exist for ignorance and 
thus are the obscurationally existent, having no more status than the horns 
of a rabbit. Still, it has to be admitted that this reading is quite uncomfort-
able in a system that likely upholds the valid establishment of conventional 
phenomena. Perhaps Tsong-kha-pa has revealed what Kamalashīla should 
have said in order to relieve this internal contradiction while at the same 
time demonstrating an identification of true existence in terms of an innate 
apprehension of true existence.

In any case, let us turn to seeing just how Tsong-kha-pa draws out from 
Kamalashīla’s commentary the meaning of ultimate or true existence in 
terms of the innate apprehension of true existence. Tsong-kha-pa recasts 
Kamalashīla’s statement:

All entities of false things — [existing] through the power of those 
living beings’ mentations—are said “only to exist convention-
ally/obscurationally.”

into his own terms so that its implicit meaning—true existence, the object 
of negation in terms of the innate apprehension of true existence—can be 
articulated. He says:

---

a Hopkins, Tsong-kha-pa’s Final Exposition of Wisdom, 192. The Tibetan is from Tsong 
ka pa, Illumination of the Thought, 131.
Since this is the case, [in the Autonomy School] “existing in the manner of an objective mode of abiding without being posited through appearing to an awareness, or through the force of an awareness” is to truly exist, to ultimately exist, and to exist as [the object’s own] reality, and apprehending such is an innate apprehension of true existence.

The independence of the object—its true existence—is indicated by “without being posited through the power of appearing to an awareness, or through the force of an awareness.” It is as if one’s awareness does not influence the existence of the object at all. The word “without (min par)” makes Tsong-kha-pa’s restatement opposite from Kamalashīla’s exposition that things only exist conventionally through the power of mentations. Tsong-kha-pa understands mentations as Kamalashīla’s prerequisite for explaining all things as conventionally existing; that is, without the power of mentations, nothing would exist conventionally. He does this by changing “through the power of mentations” in Kamalashīla’s statement to “through the power of appearing to an awareness, or through the power of an awareness,” thereby emphasizing that mentations are not mistaken awarenesses since they allow things to conventionally exist.

True existence is the very opposite of this conventional existence. Conventional existence itself depends upon the force of mentations—conceptual and non-conceptual awarenesses, whereas true establishment excludes the role of awarenesses from its appearance. In this way Tsong-kha-pa signifies that true existence is seemingly dissociated from what appears to an awareness. By bringing in “posited,” Tsong-kha-pa explains that the role of mentations, or awarenesses, is to posit, or certify, things as conventionally existent.

Tsong-kha-pa also converts the status of the object in Kamalashīla’s

---

a It does not mean that he excludes all types of consciousness from the appearance of true existence because as Kamalashīla would agree, true existence appears through the power of an obscurer, or mistaken awareness.
statement, “All entities of false things…are said ‘only to exist conventionally’” into its opposite. He converts “All entities of false things” into the mode of true existence: “existing in the manner of an objective mode of abiding,” and Kamalashīla’s “only to exist conventionally” into its opposite: “to truly exist.” Then, he adds “apprehension of such is an innate apprehension of true existence” to introduce the notion of the apprehending consciousness and to summarize his point.

Unlike the object of negation in terms of the intellectually imbued apprehension of true existence that is only apprehended in dependence upon scriptures and/or reasonings, this type of true existence is innately and beginninglessly apprehended by all beings. Hence, Tsong-kha-pa says that this innate apprehension of true existence is a subtler mode of misapprehension, and its object can be called the object of negation in terms of the innate apprehension of true existence.

As Kamalashīla himself says in the *Illumination of the Middle*:⁹

A mistaken awareness that superimposes—on things that in reality [or ultimately] are natureless—an aspect opposite to that [naturelessness] is called an “obscurer” (kun rdzob, samvṛti) because it obstructs [itself] from [perception of] suchness or because it veils [other awarenesses] from perception of suchness. [The Descent into Lāṅkā] Śūtra also says:

The production of things [exists] conventionally/ obscurationally (kun rdzob tu, samvṛtyā); Ultimately it lacks inherent existence. That [consciousness] mistaken with regard to the lack of inherent existence Is asserted as the obscurer of reality (yang dag kun rdzob, satyaṃ samvṛti).

All false things seen [by sentient beings] displayed by that [mistaken awareness] due to having arisen from it are called “just obscurational.” Moreover, that [mistaken awareness] arises through the maturation of predispositions [established] by beginningless mistake. Also by means of that [mistaken awareness] all living beings see [phenomena] displayed as if they had an inherent nature in reality. Therefore, all entities of false things—[existing] through the power of those [living beings’] mentations—are said “only to exist conventionally/ obscurationally.”

---

Tsong-kha-pa has creatively reworked the various elements of this statement to bring to the fore a possible presentation of ultimate existence, the object of negation, in accordance with an innate misapprehension. It is a brilliant reshaping of Kamalashila’s system which Jam-yang-shay-pa encapsulates in this section of Our Own System as:

The two, the measure of true establishment and the measure of establishment in conventional terms in this system, exist because:

- establishment as its own mode of abiding without being only posited through the force of appearing to a non-defective awareness is the measure of true establishment, and
- establishment as only posited through the force of appearing to a non-defective awareness is the measure of conventional establishment, and
• an awareness (1) apprehending [phenomena] as established that way [that is, as established as their own mode of abiding without being only posited through the force of appearing to a non-defective awareness] and (2) not polluted by tenets is an innate conceptual consciousness apprehending true establishment, and

• since an apprehension of true existence obstructs the suchnessa of reality as if veiling it with a cloth, it is described as “obscurational” (kun rdzob, saṃvyrtī).

Dispelling objections to outflows of this presentation

Over the course of six debates Jam-yang-shay-pa

1. clarifies the boundaries of central terminology in order to maintain distinctions between the Autonomy School and the Consequence School
2. clarifies the boundaries of central terminology in order to maintain distinctions between the Autonomy School and lower schools.

1. Clarifying the boundaries of central terminology in order to maintain distinctions between the Autonomy School and the Consequence School (debates 17-19)

A nonexistent like the horns of a rabbit, despite being established as only posited through the force of an awareness (blo la snang ba’i dbang gis bzhag tsam du grub pa), is neither established in conventional terms (tha snyad du grub pa) nor conventionally established (kun rdzob tu grub pa). This leads to the qualm that if even a nonexistent is established as only posited through the force of an awareness, then all existents, that is, all phenomena, must be established as only posited through the force of an awareness, the subject’s side, in which case it would to be difficult for Autonomists to hold that all phenomena are established from their own side, which means the object’s side, but Jam-yang-shay-pa points out that Autonomists do not find these to be contradictory. His unstated point is the

---

a That is to say, a consciousness apprehending true existence obstructs the perception of suchness.
Consequentialists find these two positions to be contradictory.

Then, the next point is: If Autonomists hold that all phenomena are established as only posited through the force of an awareness and both conceptual and non-conceptual consciousnesses exist in that “awareness,” it flows from this that all phenomena are only posited through the force of appearing to a conceptual consciousness. Jam-yang-shay-pa accepts that the Autonomists assert this, but he does not allow that they therefore assert that all phenomena are only imputed by a conceptual consciousness, the latter being the position of the Consequence School. As Jam-yang-shay-pa succinctly says:

an object posited through the force of appearing to a non-defective conceptual consciousness requires that the object exist in the mode of abiding in accordance with how it is apprehended by that [non-defective conceptual consciousness], but due to the phrase “only imputed by a conceptual consciousness” [an object only imputed by a conceptual consciousness] requires [an object] not in accordance with the mode of abiding superimposed by this [conceptual consciousness].

2. Clarifying the boundaries of central terminology in order to maintain distinctions between the Autonomy School and lower schools (debates 20-22)

Since lower schools of tenets know that impermanent and permanent objects are posited through the force of the two valid cognitions—direct perception and inference, which are non-defective awarenesses—it might seem that lower schools of tenets realize that all phenomena are conventionally established in the way that the Autonomy School presents conventional establishment because, as indicated above, Jam-yang-shay-pa holds that in the Autonomy School:

establishment as only posited through the force of appearing to a non-defective awareness is the measure of conventional establishment.

However, Jam-yang-shay-pa offers this highly provocative distinction:

these [Proponents of True Existence] accept that [forms and so forth] appearance to a non-defective awareness itself as the mode of abiding of those objects and accept (1) that there is nothing
more than [forms and so forth] being posited over there through the force of appearing [to a non-defective awareness] and (2) that the comprehension of the mode of abiding of objects of comprehension by the two valid cognitions is the positing of objects of comprehension.

Put another way, the lower schools propound that objects have their own uncommon mode of abiding (thun mong ma yin pa'i sdod lugs) over there on the object’s side, whereas the Autonomists assert that objects have a common, or shared, mode of subsistence (thun mong ba'i gnas lugs) with the subject’s side.

The final two debates concern how to deal with the fact that both Autonomists and Consequentialists use the same terminology but with different meanings. Jam-yang-shay-pa’s central point is that Autonomists assert phenomena to exist the way they appear to be inherently existent whereas Consequentialists do not.

**Editions Consulted**

A single basic edition of Jam-yang-shay-pa’s *Decisive Analysis of the Middle* was consulted:

This edition was originally printed in La-brang-tra-shi-khyil monastery founded by Jam-yang-shay-pa and is the mother edition of four other editions utilized:

---

b This edition was provided to the UMA Institute for Tibetan Studies by the late E. Gene Smith (1936-2010) in 2010.

5. The digital Tibetan text of Jam-yang-shay-pa’s *Great Exposition of the Middle* provided in this book was supplied by the Drepung Gomang Library of Go-mang College in Mundgod, Karnataka State, India. It is likely a slightly revised version of the 1999 codex mentioned in item #4. It has been edited in accordance with the “2011 TBRC bla brang” and other sources.

The production of this book benefitted greatly from consultations with Losang-gyal-tshan, Ge-she at Go-mang College in Mundgod, Karnataka State, India, who also served for a term as Disciplinarian at the Gyu-may Tantric College in Hunsur, India. He resolved the meaning of many passages in Ngag-wang-pal-dan’s commentary and edited and contributed to the interpolations into the Tibetan text.

I also wish to thank Dr. Elizabeth Napper who read the entire manuscript and offered many helpful editorial suggestions.

Jongbok Yi
Jam-yang-shay-pa’s
GREAT EXPOSITION
OF THE MIDDLE

The Tibetan text and the translation are highlighted in three colors: black, blue, and red. Blue colored statements present what Jam-yang-shay-pa considers to be right positions, while red colored statements represent what Jam-yang-shay-pa considers to be wrong positions. Black words are merely neutral information or function structurally. In the Tibetan, turquoise highlight indicates material added in place of ellipses, and magenta highlight sets off the ellipsis indicator.
2: Identifying the class discordant with knowledge of suchness {2 parts}

This has two parts: 1) refuting quasi-identifications by Tibetans of the object of negation, in connection with the reasons for identifying the object of negation and 2) individually identifying the object of negation in the Autonomy School and the Consequence School.

A: Refuting quasi-identifications by Tibetans of the object of negation, in connection with the reasons for identifying the object of negation

Tsong-kha-pa’s Explanation [of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’”]: Illumination of the Thought] says:\(^c\)

With regard to delineating the absence of true existence in phenomena, if you do not understand well just what true establishment is, as well as how [phenomena] are apprehended as truly existent, the view of suchness will definitely go astray. Shāntideva’s Engaging in the Bodhisattva Deeds says that if the thing imputed, the generality [or image] of the object of negation, does not appear well to your awareness, it is impossible to apprehend well the nonexistence of the object of negation:

Without making contact with the thing imputed,
The nonexistence of that thing is not apprehended.

\(^c\) The translation is from Jeffrey Hopkins, Tsong-kha-pa’s Final Exposition of Wisdom (Ithaca, NY: Snow Lion Publications, 2008), 186; there are a few slight differences in choice of translation terms as indicated below when passages are cited. The ellipsis in Jamyang-shay-pa’s citation, indicated by nas, has been substituted with its contents. The Tibetan: Tsong kha pa blo bzang grags pa, dbu ma la jug pa rgya cher bshad pa dgongs pa rab gsal (Karnataka, India: Drepung Loseling Library Society, 1992), 128-129.
Therefore, unless true establishment, which is what does not exist, and the aspect of the object of negation, which is that of which [phenomena] are empty, do not appear—just as they are—as objects of [your] awareness, good ascertainment of the lack of true establishment and of the entity of emptiness cannot occur.

Furthermore, mere identification of (1) a true establishment that is superficially imputed by proponents of tenets and (2) [the consciousness] apprehending such true establishment is not sufficient. Because of this, it is most essential to identify well the innate apprehension of true establishment that has operated beginninglessly and exists both in those whose awarenesses have been affected through [study of] tenets and in those whose awarenesses have not been affected in this way, and to identify the true establishment apprehended by this [mind]. For if you have not identified these, even if you refute an object of negation through reasoning, the adherence to true establishment that has operated beginninglessly is not harmed at all, due to which the meaning at this point would be lost.

Furthermore, having initially identified the apprehension of true establishment in your own [mental] continuum, you ought to know how the reasonings serve to disprove the object of that [apprehension] directly and indirectly. For, refutation and proof only directed outside are of very little benefit.
1. As Tsong-kha-pa’s “Questions on Points of Virtuous Endeavor: Shining Intention” says, many earlier Tibetan elders propounded in many ways: Even though one has not identified the object of negation, the non-dawning of any object to one’s awareness and not thinking anything is to see, to realize the mode of subsistence, and so forth.

Our response: Well, for them, it [absurdly] follows that you realize the mode of subsistence of all the stable and the moving [that is to say, the inanimate and the animate] in worldly realms that you yourself do not know because aspects of those [that is, all the stable and the moving in worldly realms] do not dawn to your awareness and [according to you] the non-dawning of those is the meaning of seeing the mode of subsistence of these objects.

If you accept that [you realize the mode of subsistence of all the stable and the moving, that is to say, the inanimate and the animate, in worldly realms that you yourself do not know], it very absurdly follows that whatever is a
non-view ignorance (lta min gyi ma rig pa) necessarily realizes emptiness!

Furthermore, it [absurdly] follows that, when the aspect of emptiness dawns [to an awareness], the aspect of the negative of its object of negation does not dawn because [according to you] the non-dawning of anything to an awareness is a realization of emptiness. You have accepted the reason [which is that the non-dawning of anything to an awareness is a realization of emptiness].

If you accept [that when the aspect of emptiness dawns to an awareness, the aspect of the negative of its object of negation does not dawn,] it [absurdly] follows that at that time [when the aspect of emptiness dawns,] the factor that is the negative of the object of negation—true establishment—does not dawn because you accepted [that when the aspect of emptiness dawns to an awareness, the aspect of the negative of its object of negation does not dawn].

You cannot accept [that at that time the factor that is the negative of the object of negation, true establishment, does not dawn] because [emptiness] is a non-affirming negative that is a negative of true establishment.
There is entailment [that if (emptiness) is a non-affirming negative that is a negative of true establishment, you cannot accept that when the aspect of emptiness dawns, the factor that is the negative of the object of negation—true establishment—does not dawn] because when meaning-genera-
tilities (don spyi, arthasāmānya) of non-affirming negatives dawn in de-
pendence upon explicitly refuting their objects of negation, it is necessary that another phenomenon is not projected explicitly or implicitly, and with regard to this without the meaning-generality of the object of negation previously dawning to an awareness, the nonexistence that is the negative of it does not dawn to an awareness, because Shāntideva’s Engaging in the Bodhisattva Deeds says:d

Without making contact with the thing imputed,
The nonexistence of that thing is not apprehended.

\[IX.139ab; Shāntideva (zhi ba lha, fl. 8th century C.E.), Engaging in the Bodhisattva Deeds (byang chub sems dpa’i spyod pa la ’jug pa), in bstan ’gyur (sde dge), TBRC W23703.105 (Delhi, India: Delhi Karmapa choedhey, Gyalwae sung rab partun khang, 1982-1985), 36a.6; see also Shantideva, A Guide to the Bodhisattva’s Way of Life, trans. Stephen Batchelor (Dharamsala, India: Library of Tibetan Works & Archives, 1979), 161. This stanza is part of the conclusion of a debate against the Sāṃkhya system.\]
Moreover, it follows that with regard to realization of emptiness, a mere non-dawning of appearances of coarse conventionalities is not sufficient because with regard to that [realization of emptiness] a dawning of an aspect [that is, a generic image] of the naturelessness of those [conventional] objects is necessary, but without the dawning of that [aspect (that is, a generic image) of the naturelessness of those conventionalities] a mere non-appearance of those [conventional] objects is not sufficient.

It follows [that with regard to that (realization of emptiness) a dawning of an aspect (that is, a generic image) of the naturelessness of those objects is necessary, but without its dawning a mere non-appearance of those objects is not sufficient,) because (1) Buddhapālita asserts that for former and future births, for example, such is needed; and (2) the glorious Chandrakīrti also asserts such.

The first [part of the reason which is that Buddhapālita asserts that for
former and future births, for example, such is needed] is established because the Buddhapālita [Commentary] says.\(^a\)

Just as these two [the view that the world does not exist and the view that all things are not produced] differ very greatly, so here also the perceptions [found in the texts of the Nihilists] such as, “This world does not exist,” [meaning that this life is not the effect of other lives] are thoughts beclouded with ignorance. However, the others [that is, the Proponents of the Middle Way]—who see that all phenomena are not [inherently] produced and do not [inherently] cease because they are empty of inherent existence—have preceded their conclusion with the mind of analysis. Therefore, these two [Nihilists and Proponents of the Middle Way] are very different.\(^b\)

\(^a\) This is a response to the Nihilists’ assertion that nonexistence and emptiness are equivalent. Their assertion and the first part of Buddhapālita’s refutation go as follows:

[The Nihilists say,] “This world [or life] does not exist [as an effect of past lives]. A future world does not exist. Also, spontaneously born sentient beings [such as hell-beings] do not exist,” and so forth. What is the difference between their view and the view [of the Proponents of the Middle Way] that all things are not produced and do not cease?

[Answer:] There is a great difference between these two. Not knowing the meaning of emptiness, you think that these two are similar. Acting with equanimity [that is, indifference] when one has not analyzed [to find that all sentient beings should be valued equally] and acting with equanimity when one has so analyzed are similar only in that both can be characterized as acting with equanimity. However, acting with equanimity but without analysis is involved in the entwinements of ignorance. Acting with equanimity when one has analyzed [is the result of knowledge and] is used by the Supramundane Victors.

\(^b\) Buddhapālita (sangs rgyas bskyangs, ca. 470-540), Buddhapālita Commentary on (Nāgārjuna’s) “Treatise on the Middle” (dbu ma rtsa ba ’i ’grel pa buddha pā ’li tu, buddhāpalitamūlamadhyamakavṛtti), sde dge 3842, dbu ma, vol. tsha, 243a.1-243a.7; see also Akira Saito, “A study of the Buddhapālita-Mūlamadhyamakāvṛtti” (Ph.D. diss., Australian National University, Australia, 1984), 252-253. This passage is a part of Buddhapālita’s commentary on stanza 7cd in Nāgārjuna’s Fundamental Treatise on the Middle, Called “Wisdom” (dbu ma rtsa ba shes rab, prajñānāmūlamadhyamakārikā) in Chapter XVIII, Analysis of Self (bdag brtag pa, ātmapariksā) where he first cites the Treatise and then gives his commentary:
[This statement] entails [that Buddhapālita asserts that for former and future births, for example, such is needed] because it explains that [the Nihilists and the Proponents of the Middle Way] are very different due to the fact that the Nihilists’ seeing [the mere non-appearance of these objects] is from the power of ignorance and the Proponents of the Middle Way see [phenomena] as not [inherently] produced and so forth by reason of the nonexistence of the inherent nature of all phenomena.
Refuting Quasi-Identifications by Tibetans of the Object of Negation

The second [part of the reason which is that the glorious Chandrakīrti also asserts such] is established because Chandrakīrti’s Clear Words says:

Here some say, “The Proponents of the Middle Way are indistinguishable from Nihilists because they propound that virtuous and non-virtuous actions, agents, fruits, and all worlds [that is, lives]\textsuperscript{a} are empty of inherent existence, and the Nihilists also say that these are nonexistent. Therefore, Proponents of the Middle Way are indistinguishable from Nihilists.”

It is not so.

“How?”

The Proponents of the Middle Way are proponents of dependent-arising; they say that due to arising dependent on, or reliant on, causes and conditions all—this world, the next, and so forth—lack inherent existence. The Nihilists do not realize\textsuperscript{b} future worlds [that is, future lives] and so forth as non-things\textsuperscript{c} because of being empty of inherent existence due to being dependent-arisings.\textsuperscript{d}

\textsuperscript{a} Lives as fruits of moral actions.

\textsuperscript{b} Skt. pratipannaḥ.

\textsuperscript{c} “Non-things” (dngos po med pa, abhāva) could be translated as “without thingness.”

Since Chandrakīrti states that the Mādhyamikas assert that this world and so forth lack inherent existence when he says, “The Mādhyamikas are proponents of dependent-arising; they say that due to arising dependent on, or reliant on, causes and conditions all—this world, the next, and so forth—lack inherent existence,” “non-things” needs to be understood in the context of the previous passage. That is, “non-thing” does not merely nonexistence or non-effective thing, but the absence of inherent or true existence.

\textsuperscript{d} The text reads zhes pa nas which I have supplemented with the omitted part of the quote according to Chandrakīrti’s Clear Words. See Chandrakīrti (zla ba grags pa, fl. 7th century C.E.), Clear Words, Commentary on (Nāgārjuna’s) “Treatise on the Middle” (dbu ma rtsa ba’i grel pa gsal ba, mūlamadhyamakavṛttiprasannapadā), sde dge 3860, dbu ma, vol. ‘a, 117b.6.
Through these former and latter passages [by Buddhapālita and Chandrakīrti], understand the measure of realizing the view!

2. Moreover, the Translator Tag-tshang says: Since, despite not knowing the details with regard to conventions (tha snyad, vyāvahāra), one can realize emptiness, conventions do not have to be validly established in order to realize emptiness because the ultimate is other than conventionalities (kun rdzob, saṃvyrti).

\[\text{If “other” (gzhan) means different entity (ngo bo gzhan), Ge-lug scholars would not agree, and if it means just other (gzhan), that is to say, different, then they would agree because the relation between the two truths is the same entity but different isolates (ngo bo gcig la ldog pa tha dad).}\]
Our response: It follows that without knowing [how to] posit the valid establishment of conventions it is impossible to realize naturelessness because without knowing [how to] posit valid establishment, it cannot be posited that emptiness is realized through holding that [phenomena] are natureless. It follows [that without knowing how to posit valid establishment, it cannot be posited that emptiness is realized through holding that phenomena are natureless] because [without knowing how to posit valid establishment,] with regard to former and later births [it cannot be posited that the emptiness of former and later births is realized through holding that former and later births are natureless].

It follows [that without knowing how to posit valid establishment with regard to former and later births it cannot be posited that the emptiness of former and later births is realized through holding that former and later births are natureless] because the Diverged Afars\(^{a}\) holding former and later births as natureless, for example, is not a view of emptiness.

\(^{a}\)rgyang phan pa (āyata) also called lokāyata (jig rten rgyang phan pa). According to a Tibetan oral etymology explained by Ngag-wang-leg-dan (ngag dbang legs ldan), lokāyata (jig rten rgyang phan pa) etymologically means “Flung Afar from the world” and is pejorative as Jam-yang-shay-pa says, “Because they have gone apart from the correct view, they are Diverged Afars [literally, Those Who Are Flung Afar].” See Hopkins, Maps of the Profound, 96. They are moral Nihilists.
It follows [that the Diverged Afars’ holding former and later births as natureless is not a view of emptiness] because the reason why the [Diverged Afars’ holding former and later births as natureless] is a view of annihilation but the Middle Way Proponents’ holding former and later births as natureless is a pure view is due to respectively [the Diverged Afars’] not asserting [former and later births] in conventional terms but [the Middle Way Proponents’] asserting [former and later births in conventional terms].

because Chandrakīrti’s *Clear Words* says:

*Objection:* Nevertheless, because [the Diverged Afars] realize that the entity of the nature of those things is not existent, respective to that, they are similar by way of this view.

*Answer:* They are not because the Proponents of the Middle Way assert them as conventionally existent, and because those [that is, the Diverged Afars] do not assert [such]. Hence they are not similar.
Also, from Tsong-kha-pa’s saying that until the view [of emptiness] is found, the difference between naturelessness (rang bzhin med pa) and non-existence (med pa) is not distinguished, it is known [that without knowing how to posit the valid establishment of conventions it is impossible to realize naturelessness (tha snyad tshad grub ’jog mi shes par rang bzhin med pa rtogs mi srid pa)].

3. With regard to the [difference between the Diverged Afars and the Proponents of the Middle Way on naturelessness and nonexistence,] someone says: It follows that the Diverged Afars’ holding that former and later births are natureless is not a view of annihilation because although those [Diverged Afars] do not realize such [that is, the conventional establishment of former and later births, the Diverged Afars’ holding that former and later births are natureless] accords with the Middle Way view and mode of holding [that former and later births are natureless]. It follows [that although those (Diverged Afars) do not realize such (that is, the conventional establishment of former and later births, the Diverged Afars’ holding that former and later births are natureless) accords with the Middle Way view and mode of holding (that former and later births are natureless)] because (1) former and later births are natureless and (2) both of them [the Diverged Afars and the Proponents of the Middle] hold that those [former and later births] are natureless.
Our response: [That (1) former and later births are natureless and (2) both the Diverged Afars and the Proponents of the Middle hold that those former and later births are natureless] does not entail [that the Middle Way view and mode of holding that phenomena are natureless accord with the Diverged Afars’ holding that former and later births are natureless] because although they are similar [in holding that] the objects, former and later births, are natureless, whether it is the Middle Way view or not are posited separately due to differences in the inner modes of the realizers’ awarenesses.

It follows [that although they are similar in holding that the objects, former and later births, are natureless, whether it is the Middle Way view or not are posited separately due to differences in the inner modes of the realizers’ awarenesses] because it is like, for example, when both someone who identified a robber man as a robber and another who did not identify such say, “He is the robber,” it is posited that the one who knew the robber identified the robber and the other one did not identify the robber.
Moreover, for example, at the time of dispute two witnesses testify with regard to what is the true fact. Between them, one directly saw the fact, but the other did not directly see the fact, and is mistaken, or is on the side of a friend. When both of them are also made to speak with regard to this, the latter has spoken the fact as it is in truth, but because the fact was not even directly [seen, the latter’s testimony] is false and also endowed with impropriety and ill repute. When the other one speaks the fact, then because the fact was directly [seen], it is a true statement and endowed with propriety and repute.

Likewise, although it is a fact that all phenomena are empty and because of being empty are not produced and not ceased, those [that is, the Proponents of the Middle Way] who have knowledge by direct perception of it [that is, emptiness,] are endowed with goodness and are praised, but because the other [that is, the Diverged Afars] do not directly [see] emptiness, they are polluted by defects of view and derided by the wise. Hence, these two are very different.

---

\(a\) Without Christian Lindtner’s translation, I could not have understood this part. See Lindtner, “Buddhapālita on Emptiness,” 206-207.

\(b\) What the mistake is is unclear; it might mean “to be bribed” as Lindtner speculates.

\(c\) In a similar context, \textit{mdza’} in Chandrakīrti’s \textit{Clear Words} means friendly. See Chandrakīrti, \textit{Clear Words}, 118a.3.

\(d\) The ellipsis in the Tibetan is supplemented with its contents from the \textit{Buddhapālita Commentary} on Nāgārjuna’s \textit{Treatise of the Middle}, the chapter on Analysis of Self, XVIII.12 (sde dge 3842, \textit{dbu ma}, vol. tsha, 243b.2-243b.6); also see Saito, “A Study of the Budhapālita,” 253-254; Christian Lindtner, “Buddhapālita on Emptiness,” \textit{Indo-Iranian Journal} 23, no. 3 (1981):196.
[This] entails [that it is like, for example, that when both someone who identified a man as a robber and another who did not identify such say “He is the robber,” it is posited that the one who knew the robber identified the robber and the other one did not identify the robber] because the meaning of [his] statement “they are polluted by defects of view” exists, and because Chandrakīrti’s *Clear Words* also says:

*Objection:* They are the same [in holding] that things are [not established].

---

a The bracketed material here is inserted according to Chandrakīrti’s *Clear Words*. See Chandrakīrti, *du ma rtsa ba’s ’grel pa tshig gsal ba*, in bstan ’gyur (sde dge), TBRC W23703.102 (Delhi: Delhi Karmapa Choedhey, Gyalwae sungrab partun khang, 1982-1985), 118a.2. This part is missing in Jam-yang-shay-pa’s *Decisive Analysis*, 183a.6. I have confirmed that this is also missing in the 1997 Mundgod Revision of Ngawang Gelek bla
[Answer:] Even if they are just similar in holding that things are [not established], they are just dissimilar because the realizers are different. It is as follows: For example, with regard to a man who has committed robbery,\(^a\) without correctly knowing [who the robber is], one, having been incited by disliking him, wrongly says, “This man stole”, but another, actually seeing [the robbery], does identify [that this man is the robber].\(^b\)

\(^{\text{a}}\) In the sde ge edition of Chandrakīrti’s *Clear Words*, rkus byas pa reads rku byas pa; however, the three editions of Jam-yang-shay-pa’s *Decisive Analysis* that are consulted here read rkus byas pa. See Chandrakīrti, *dbu ma rtsa ba’i ’grel pa tshig gsal ba*, 118a.3; the 2007 Mundgod edition, 250; the 2004 Beijing edition, 187; the 1997 Mundgod Revision of Ngawang Gelek *bla brang* edition, 183b.1.

\(^{\text{b}}\) From “without” to the end of the sentence is a filling in of an ellipsis; Chandrakīrti, *dbu ma rtsa ba’i ’grel pa tshig gsal ba*, in bstan ’gyur (sde dge), TBRC W23703.102 (Delhi: Delhi Karmapa Choedhey, Gyalwae sungrab partun khang, 1982-1985), 118a.2-118a.3.
4. Someone says: It follows that the view in the [mental] continuum of a Diverged Afar* (rgyang phan, ayata) that former and later births are natureless is the Middle Way view because the naturelessness of former and later births is the final mode of subsistence.

Our response: [That the naturelessness of former and later births is the final mode of subsistence] does not entail [that the view in the Diverged Afars’ mental continuum that former and later births are natureless is the Middle Way view]. Well then, it [absurdly] follows that the view in the [mental] continuum of a Proponent of the Great Exposition that a [Buddha’s] enjoyment body (longs sku, sambhogakāya) is natureless is the Middle Way view because the naturelessness of an enjoyment body is the final mode of subsistence.

[You have asserted] the three spheres [of self-contradiction].

---

* Nihilist.

---

In brief, in general, the three spheres are composed of three elements: the opponent’s assertion of the reason (rtags khas langs pa), the opponent’s assertion of the entailment (khyab pa khas langs pa), and the opponent’s assertion of the opposite of “thesis” of the consequence (bsal ba’i bzlog phyogs khas langs pa). Since the opponent has asserted or is forced to assert the reason and the entailment, the opponent has to accept the consequence; however, if the opponent also asserts or is forced to assert the opposite of the consequence, then the opponent is caught in a self-contradiction. For a lengthy discussion of the three spheres, see Jongbok Yi, “Monastic Pedagogy on Emptiness in the Geluk Sect of Tibetan Buddhism: Intellectual History and Analysis of Topics Concerning Ignorance According
Likewise, know how to apply [this mode of refutation] to the Mind-Only Proponents’ view that the imputational nature is not established by way of its own character.

5. Moreover, someone says: It follows that such a view in the Diverged Afars’ [mental] continuum [that former and later births are natureless] is a factually concordant conceptual consciousness (rtog pa don mthun) because of the previous reason [which is that the naturelessness of former and later births is the final mode of subsistence].

Our response: [That the naturelessness of former and later births is the final mode of subsistence] does not entail [that such a view in the Diverged Afars’ continuum that former and later births are natureless is a factually concordant conceptual consciousness].

Well then, it [absurdly] follows that the view in the [mental] continuum of a Proponent of the Great Exposition that a [Buddha’s] enjoyment body is such [that is, natureless] is a factually concordant conceptual consciousness; the reason is as before, [that is, because the naturelessness of an enjoyment body is the final mode of subsistence].

---
to Svātantrika-Mādhyamika in Monastic Textbooks by Jamyang Shaypa” (Ph.D. diss., University of Virginia, 2013), Chapter 5.
[You have asserted] the three spheres [of self-contradiction].

6. Moreover, Go-bo [Go-ram-pa Sö-nam-seng-ge]a says: It follows that the statement by the Foremost Precious [Tsong-kha-pa]:b

When, in that way, you have identified well the apprehension of true existence, you will understand that there are many apprehensions that are not the two apprehensions of self, whereby all wrong ideas asserting that reasonings analyzing suchness refute all objects apprehended by conceptuality will be overcome.

is not logically feasible; [for] the thought of the Perfection of Wisdom Sūtras is to be explained as being that howsoever forms are apprehended—as the four extremes of being emptyc or not empty or as the middle free from them—are apprehensions of extremes and hence must be refuted, and

---

a go rams pa bsod nams seng ge, 1429-1489.
b This passage, which has been expanded to provide more context, appears to be from Go-ram-pa’s summary of Tsong-kha-pa’s position in the former’s Distinguishing the Views [of Emptiness]: Moonlight [To Illuminate] the Main Points of the Supreme Vehicle (ita ba’i shan ’byed theg mchog gnad kyi zla zer) where he says:

Hence, the mind that understands reality is the apprehension of emptiness alone—that is, of the emptiness of truth [that is arrived at] after having negated truth. If one properly identifies [what it means] to apprehend [things] as true (bden ’dzin), one will come to understand that there are many conceptual thoughts that are neither of the two forms of the grasping at truth [of self and phenomena]. This counteracts all of the mistaken views (log rtog) that believe that every object that is apprehended by a conceptual thought is negated by means of the reasoning that analyzes reality.

The translation is from José Ignacio Cabezón and Geshe Lozang Dargyay, Freedom from Extremes: Gorampa’s ‘Distinguishing the Views’ and the Polemics of Emptiness Studies in Indian and Tibetan Buddhism (Boston, MA.: Wisdom Publications, 2007), 82-83.

c The four extremes (mtha’ ’bshit) are, for instance, forms are empty, not empty, both empty and not empty, and neither empty nor not empty.
[thus] it is not logically feasible that you [Tsong-kha-pa] having solely refuted truth [that is, true establishment (bden par grub pa),] assert that [forms] abide in the middle.

Our response: Well then, it [absurdly] follows that the distinction that reasoning analyzing the ultimate refutes inherent existence but does not refute forms and so forth that are illusory-like dependent-arising is not to be made because [according to you] that reasoning refutes all whatsoever objects. You have accepted the reason [which is that reasoning refutes all whatsoever objects].

If you [Go-ram-pa] accept [that the distinction that reasoning analyzing the ultimate refutes inherent existence but does not refute forms and so forth that are illusory-like dependent-arising is not to be made,] you contradict many sūtras and treatises such as Chandrakīrti’s Clear Words which says:

We are not propounding that “Action, doer, effect, and so forth do
not exist.”

Why?

We posit that inherent existence does not exist.

7. Moreover, with respect to the statements in Tsong-kha-pa’s “Explanation [of (Chandrakīrti’s) ‘Supplement to (Nāgārjuna’s) Treatise on the Middle’]” and so forth that refutation of objects imputed only by Forders and Proponents of Tenets does not harm the apprehension of inherent existence that has operated beginninglessly, the Translator

It appears that Jam-yang-shay-pa summarizes Tsong-kha-pa’s introduction to the object of negation in his Illumination of the Thought (see above, 43):

With regard to delineating the absence of true existence in phenomena, if you do not understand well just what true establishment is, as well as how [phenomena] are apprehended as truly existent, the view of suchness will definitely go astray. Shāntideva’s Engaging in the Bodhisattva Deeds says that if the thing imputed, the generality [or image] of the object of negation, does not appear well to your awareness, it is impossible to apprehend well the nonexistence of the object of negation:

Without making contact with the thing imputed,

The nonexistence of that thing is not apprehended.

Therefore, unless true establishment (which is what does not exist) and the aspect of the object of negation (which is that of which [phenomena] are empty) do not appear—just as they are—as objects of [your] awareness, good ascertainment of the lack of true establishment and of the entity of emptiness cannot occur.

Furthermore, mere identification of (1) a true establishment that is superficially imputed by proponents of tenets and (2) [the consciousness] apprehending such true establishment is not sufficient. Because of this, it is most essential to identify well the innate apprehension of true establishment that has operated beginninglessly and exists both in those whose awarenesses have been affected through [study of] tenets and in those whose awarenesses have not been affected in this way, and to identify the true establishment apprehended by this [mind].
Tag-tshang says: This is not logically feasible because even among innate awarenesses there are apprehensions of permanence and of former and later [phenomena] as one.

Our response: [If even among innate awarenesses there are apprehensions of permanence and of former and later (phenomena) as one,] it is not entailed [that it is not logically feasible that refutation of objects imputed only by Forders and Proponents of Tenets does not harm the apprehension of inherent existence that has operated beginninglessly,] because there is something eliminated by “only” [in “imputed only by Forders and Proponents of Tenets”]. Well, for him, it [absurdly] follows that whatever is an apprehension of permanence is necessarily an apprehension in accordance with the Forders’ superimposition that the self is permanent because [according to him] an innate apprehension of permanence apprehends in that way [that is to say, in accordance with the Forders’ superimposition that the self is permanent]. You have accepted the reason [which is that an innate apprehension of permanence apprehends in that way, that is to say, in accordance with the Forders’ superimposition that the self is permanent].

For if you have not identified these, even if you refute an object of negation through reasoning, the adherence to true establishment that has operated beginninglessly is not harmed at all, due to which the meaning at this point would be lost.

See Hopkins, Tsong-kha-pa’s Final Exposition of Wisdom, 186.
If you accept [that whatever is an apprehension of permanence is necessarily an apprehension in accordance with the Forders’ superimposition that the self is permanent], it [absurdly] follows that in the continuums of those who are not involved in tenet systems such as animals and so forth, there is apprehension that the self is permanent in the sense of not being produced from causes and conditions because [in the continuums of those who are not involved in tenet systems such as animals and so forth,] there is apprehension that the self is permanent in the sense of not disintegrating until death. The reason [which is that in the continuums of those who are not involved in tenet systems such as animals and so forth there is apprehension that the self is permanent in the sense of not disintegrating until death,] is easy [to establish].
(Nāgārjuna’s) “Treatise on the Middle”) to say:

This nonproduced permanent [self imputed by Forders] is not perceived
By those spending many eons as animals,
[Yet consciousnesses conceiving “I” are seen to operate in them.
Hence, there is no self other than the aggregates].

Moreover, it [absurdly] follows that although the Proponents of the Great Exposition and the Proponents of Sūtra and so forth have not entered the Middle [view], they can harm the conceived object of the apprehension of true existence because [according to you] your [damaging] thesis [that it is not logically feasible that refutation of objects imputed only by Forders and Proponents of Tenets does not harm the apprehension of inherent existence that has operated beginninglessly] is logically feasible.b

---

a VI.125. See Hopkins, Maps of the Profound, 648. The citation is lengthened in order to provide more context. In Tibetan it is:

\[\text{བོད་ཅྩལ་ཐོག་སྟེགས་པ།}
\[\text{དེས་ཀྱང་མ་Dzེས་Ȧག་འདི་མ་མཐོང་ལ།}
\[\text{ངར་འཛིན་དེ་དག་ལ་ཡང་འཐོག་མཐོང་Ȫེ།}
\[\text{དེས་ན་ཅང་པོ་ལས་གཞན་བདག་འགའ་མེད།}
\]

b The opponent’s thesis was that Tsong-kha-pa’s statement—“Refutation of objects imputed only by Forders and Proponents of Tenets does not harm the apprehension of inherent existence that has operated beginninglessly”—is not logically feasible.
It is easy to negate Tibetans whose object of negation is too broad such as Shang Thang-sag-pa [Shön-nu-gyal-tshan] and those whose object of negation is too narrow. These [points made here] explain the main thought and not just the explicit reading of Tsong-kha-pa’s Explanation of Chandrakīrti’s “Supplement to Nagārjuna’s ‘Treatise on the Middle’.”

8. Moreover, someone in an earlier period posited: There are two objects of negation by correct reasoning (rigs pa yang dag gi dgag bya)—existent and nonexistent. And asserted: Object of negation by a correct reasoning (rigs pa yang dag gi dgag bya) and object of negation that is the opposite of the probandum of a correct sign (rtags yang dag gi bsgrub bya’i bzlog zlar gyur pa’i dgag bya) are equivalent.

With regard to this, another early scholar said:

If somebody said to me, “It follows that the subject, the apprehension of true existence, is not an object of negation by a correct sign proving [something] as not truly existent because of being a probandum of a correct sign,” I would say “[Whatever is a probandum of a correct sign] is not necessarily [an object of negation by a correct sign proving the absence of true establishment].”

^ zhang thang sag pa gzhon nu rgyal mtshan.
Our response: Well then, with regard to this, it [absurdly] follows that whatever is the predicate of the probandum in a proof of something is necessarily the probandum in the proof of that something because [according to you] the apprehension of true existence is the probandum of a correct sign. If you accept [that whatever is the predicate of the probandum in a proof of something is necessarily the probandum in the proof of that something] it is very amazing.

Also, with regard to the first thesis [that it is posited that there are two objects of negation by correct reasoning (rigs pa yang dag gi dgag bya)—existent and nonexistent and that object of negation by a correct reasoning (rigs pa yang dag) and object of negation that is the opposite of the probandum (sgrub bya, sādhya) proven by a correct sign (rtags yang dag) are equivalent] it [absurdly] follows that the subject, the apprehension of true existence, is an object of negation that is the opposite of the probandum of a correct sign (rtags yang dag) because of being an object of negation by a correct reasoning (rigs pa yang dag). It follows [that the subject, the apprehension of true existence, is an object of negation by a correct reasoning] because of being the object of negation by a correct reasoning proving the absence of true existence.
It follows [that the subject, an apprehension of true existence is an object of negation by correct reasoning (rigs pa yang dag) proving the absence of true existence] because of being an object of negation by a correct logicality ('thad pa yang dag) proving that [absence of true existence]. Whatever is an object of negation by a correct logicality ('thad pa yang dag) proving the absence of true existence] is necessarily [an object of negation by correct reasoning (rigs pa yang dag) proving the absence of true existence] because reasoning (rigs pa) and logicality ('thad pa) are equivalent.

At the point of the statement of no entailment [that is, whatever is an object of negation by a correct logicality ('thad pa yang dag) proving the absence of true existence] is necessarily [an object of negation by correct reasoning (rigs pa yang dag) proving the absence of true existence] the sign [that is, that the apprehension of true existence is an object of negation by a correct logicality proving the absence of true existence ([bden med de sgrub kyi 'thad pa yang dag gi dgag bya yin pa]) is established because since that [apprehension of true existence] is not logically feasible in accordance with its apprehension, that [apprehension of true existence] comes to be an object of negation by a correct logicality.
It follows [that] since that (apprehension of true existence) is not logically feasible in accordance with its apprehension, that [apprehension of true existence] comes to be an object of negation by a correct logicality,] because for that reason both an apprehension of true existence as well as [its] conceived object [that is, true establishment] must be posited as objects of negation by [a correct logicality] because Nāgārjuna’s Refutation of Objections says:

Or, someone’s wrong apprehension thinking
That a magically emanated woman is a [real] woman
Is negated by [another] magical emanation.
This [apprehension of true existence] is like that [that is, is refuted by words that are like illusions].

That a man’s apprehension of a magically emanated woman as a real woman is negated by [another] magical emanation is indicated by the first three lines, and “This is like that” explains that words like an emanation overcome the apprehension of inherent existence.
If you accept the root [consequence that the apprehension of true existence is an object of negation that is the opposite of the probandum of a correct sign,] it [absurdly] follows that the subject, [the apprehension of true existence,] does not exist because of being an object of negation that is the opposite of the probandum of a correct sign. You have accepted the reason [which is that the apprehension of true existence is an object of negation that is the opposite of the probandum of a correct sign].

If [you say that being an object of negation that is the opposite of the probandum of a correct sign] does not entail [being nonexistent], it [absurdly] follows that a correct sign cannot prove a probandum proving something because the object of negation that is the opposite of the probandum proving something exists. You have accepted the reason [which is that the object of negation that is the opposite of the probandum proving something exists].

It is entailed [that if the object of negation that is the opposite of the probandum proving something exists, a correct sign cannot prove a probandum proving something] because if that [object of negation that is the opposite of the probandum proving something] exists, such [an object of negation] cannot be negated because Tsong-kha-pa’s Stages of the Path says:

These also are, for instance, refutations of inherent existence—that is to say, establishment from [the object’s] own side—with respect to persons and phenomena by the sign of dependent-arising.

---

exist among objects of knowledge because whatever exists cannot be refuted.

9. With regard to that, someone says: It follows that there is no entailment that the object of negation that is the opposite of a probandum of a correct sign necessarily does not exist because nonexistence of sprout is the object of negation that is the opposite of the probandum of a correct sign proving that a sprout exists. It follows [that nonexistence of sprout is the object of negation that is the opposite of the probandum of a correct sign proving that a sprout exists] because that a sprout exists is the probandum in the proof of that.
Our response: [That a sprout exists is the probandum in the proof of that] does not entail [that the nonexistence of a sprout is the object of negation that is the opposite of the probandum of a correct sign proving that a sprout exists] because that a sprout is nonexistent is posited as the opposite of the probandum in the proof [that a sprout exists].

For this person, it [absurdly] follows that existence of self (bdag yod pa) is the object of negation of the probandum in the proof that the aggregates are selfless by the sign, dependent-arising, because [according to you, your] mode of assertion with regard to a sprout [that is, the nonexistence of sprout is the object of negation that is the opposite of the probandum of a correct sign proving that a sprout exists] is logically feasible. If you accept [that existence of self is the object of negation of the probandum in the proof that the aggregates are selfless by the sign, dependent-arising,] it very [absurdly] follows that it is reasonable to refute even the substratum.

1* Our own system
On this occasion, in order to ascertain emptiness it is necessary initially to identify the object of negation because if [the object of negation] is not identified, the emptiness that is the negative [of the object of negation] is not identified. In general, there are two [types] of objects of negation: objects of negation by the path and objects of negation by reasoning; among them, within the objects of negation by the path, there must be an existent because if there is not [an existent object of negation by the path], all sentient beings would be self-released, and the hardship of practicing the path would be meaningless.

With respect to objects of negation by correct reasoning, two types are taken as objects of negation—wrong apprehensions and the objects apprehended by them—because it is like, for example, the fact that with regard to objects of negation by the reasoning of dependence, since both (1) the apprehension of a thing as not depending on causes and conditions and (2) its object [that is, a thing’s not depending on causes and conditions] are not logically feasible and not reasonable, they are treated as objects of negation.
Although there are four [types] of correct reasoning—the reasonings of dependence, logicality, performance of function, and nature—when

a For the four types of correct reasonings, Tsong-kha-pa explains in his *Great Exposition of Stages of the Path*:

With respect to reasoned examination, from among the four reasonings:

1. The reasoning of dependence (*lhos pa’i rigs pa, apekṣāyukti*) is [from the viewpoint] that the arising of effects depends on causes and conditions. This moreover is examination from the approach of the conventional and the ultimate and their individual bases.

2. The reasoning of performance of function (*bya ba byed pa’i rigs pa, kāryakāraṇayukti*) is [from the viewpoint] that phenomena perform their respective functions, such as fire performing the function of burning and so forth. This moreover is examination that “This is the phenomenon; this is the agent; this phenomenon performs this action.”

3. The reasoning of tenable proof (*’thad pas sgrub pa’i rigs pa, upapattiśādhaṇayukti*) is to prove a meaning without contradicting valid cognition. This moreover is examination thinking whether concerning this the three valid cognitions—direct, inferential, or believable scripture—exist or not.

4. The reasoning of nature (*chos nyid kyi rigs pa, dharmatāyukti*) is to believe in (1) natures renowned in the world, such as heat being the nature of fire, moisture being the nature of water, and so forth, (2) inconceivable natures [such as placing a world-system in a single hair-pore, and so forth], and in the abiding nature, and not to contemplate other evidence for being such—examining this way.

See Tsong-kha-pa, *lam rim chen mo*, in gsung ‘bum/ tsong kla pa/ bkras lhun par rnying/
summarized they are included within two [types] because of being included into the reasoning of analyzing the ultimate and the reasoning of analyzing conventions.

Logically feasible (‘thad pa), suitable (rung ba), and reasonable (rigs pa) are equivalent because Vasubandhu’s Principles of Explanation¹ says such.

The [rigs pa of] ‘thad rigs (‘thad pa dang rigs pa, logicality and reasoning) b and the rig pa of blo rig (blo dang rig pa, awareness and knowledge) are not equivalent because in Tibetan the presence and absence of the suffix sa differ, and in Sanskrit the terms also differ since yoṣir c is used for [the rigs pa of] ‘thad rigs (logicality and reasoning) and vidya d is used for [the rig pa of] blo rig (awareness and knowledge), and also that the meanings differ is to be known from the earlier [discussion] (see above, 68ff.). Therefore, the opposite of logicality is taken as an object of negation by reasoning because when comparing the high speech (gsung rab, pravacana) of Tsong-kha-pa and his spiritual sons [Khay-drub and Gyal-tshab], it turns out that the four non-reasonables, which are the opposites of the four reasonings, are taken as objects of negation.

---

¹ 2011 TBRC bla brang and 1995 Mundgod revision of Ngawang Gelek bla brang (186a.3) read yoṣir, as does ‘jam dbyangs bzhad pa, dbu ma ‘jug pa’i mtha’ dpyod lung rigs gter mdzod (Beijing, China: pe cin nyug hran shin ’gyig par khang, 2004), 190.3. I was not able to find the corresponding Sanskrit term for yoṣir, which might be yukti.

b Correcting vidya for vidyā in accordance with the context.
Because correct reasoning (rigs pa yang dag) and correct sign (rtags yang dag) are not equivalent, the objects of negation by [a correct reasoning and a correct sign] are also not equivalent, and it is proper that, in accordance with statements by the lords of scholars [Gung-ru] Chö-kyi-jung-nay and Tag-lung-drag-pa [Lo-drö-gya-tsho], that the objects of negation by correct signs are nonexistents because there are manifold scriptures and reasonings, those [cited] earlier and so forth. Here also [correct reasoning and correct sign] have been treated in this fashion.

2* Dispelling Objections

---

\(^a\) stag lung grags pa blo gros rgya mtsho (1546-1618, Beijing 715). He was the 30th Throne Holder of Gandan.
10. **Someone says:** It follows that the subject, the apprehension\(^a\) of true existence by an apprehension\(^b\) of true existence, is not logically feasible because of being an object of negation by a correct reasoning. You have asserted the reason [which is that the apprehension of true existence by an apprehension of true existence is an object of negation by correct reasoning]. If you accept [that the apprehension of true existence by an apprehension of true existence is not logically feasible], it follows that the subject, [the apprehension of true existence by an apprehension of true existence] does not exist because of not being logically feasible.

Our response: [Whatever is not logically feasible] is not necessarily [non-existent]. For him [that is, for the opponent,] it [absurdly] follows that each of the subjects, the Outsiders’ reasonings proving the existence of a self of persons and their modes of explanation, do not exist because of not being logically feasible. The three spheres [of self-contradiction]!

11. **Moreover, someone says:** It follows that the subject, the apprehension of true existence, is an object of negation by a sign analyzing the ultimate because of being an object of negation by an inference that is a rational consciousness analyzing the ultimate.

---

\(^a\) *bzung ba:* this is the action of apprehending something as truly existent.

\(^b\) *dzin:* this is the consciousness apprehending something as truly existent.
Our response: There is utterly no entailment [that whatever is an object of negation by an inference that is a rational consciousness analyzing the ultimate is necessarily an object of negation by a sign analyzing the ultimate].

Well then, it [absurdly] follows that [according to your assertion] the wisdom realizing the absence of true existence is a probandum of a correct sign proving the absence of true existence because [according to you your] thesis [that is, that the apprehension of true existence is the object of negation by a sign analyzing the ultimate] is logically feasible.
B: Individually identifying the object of negation in the Autonomy School and the Consequence School {2 parts}

This has two parts: explaining the object of negation in the systems of the Autonomy School and the Consequence School.

1* EXPLAINING THE OBJECT OF NEGATION IN THE SYSTEM OF THE AUTONOMY SCHOOL

In Tsong-kha-pa’s Explanation of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’” this is:

A clear identification of the object of negation does not emerge in other reliable sourcebooks of the Autonomy School, but the existence that is the opposite of the mode of conventional existence described in Kamalashīla’s Illumination of the Middle is to be known as ultimate or true existence, and, therefore, let us explain it that way. This text says:

A mistaken awareness that superimposes—on things that in reality [or ultimately] are natureless—an aspect opposite to that [naturelessness] is called an “obscurer” (kun rdzob, samvrṭi) because it obstructs [itself] from [perception of] suchness or because it veils [other awarenesses] from perception of suchness. [The Descent into Laṅkā] Sūtra also says:

---

a Tsong-kha-pa, dgongs pa rab gsal, 130.3-136.20; the translation is from Hopkins, Tsong-kha-pa’s Final Exposition of Wisdom, 189-200; there are a few slight differences in choice of translation terms as indicated below when passages are cited from this.

b dbu ma snang ba, madhyamakāloka; sde dge 3887, dbu ma, vol. sa, 228a.7-228b.3.

c lang kar gshegs pa’i mdo, laṅkāvatārasūtra, stanza X.429; Sanskrit in Bunyiu Nanjio,
The Opposite of Emptiness

The production of things [exists] conventionally (kun rdzob tu, saṃvṛtyā);
Ultimately it lacks inherent existence.
That [consciousness] mistaken with regard to the lack of inherent existence
Is asserted as the obscurer of reality (yang dag kun rdzob, satyaṃ saṃvṛti).

All false things seen displayed by that [consciousness apprehending them as if they are truly established] due to having arisen from it are called “just obscurational.” Moreover, that [apprehension

---

Lankāvatāra Sūtra, 319: bhāvā vidyantī saṃvṛtyā paramārthe na bhāvakāḥ / niḥsvabhāvāvyaḥ bhrāntistatāsatyaṃ saṃvṛtibhavet //.

a kun rdzob pa kho na. I [Hopkins] take it that what arise from a consciousness conceiving true existence are not the false things themselves but the display, or appearance, of them as truly existent. Ngag-wang-pal-dan, on the other hand, holds that what arises from a consciousness apprehending true existence is an artificial apprehension of true existence in the continuum of a Proponent of True Existence. In his Annotations for (Jam-yang-shay-pa’s) “Great Exposition of Tenets” (Hopkins, Maps of the Profound, 740-742) he recasts the meaning of this passage as follows:

The subject, an innate consciousness conceiving true existence, which conceives that phenomena ultimately exist inherently whereas they do not, is called an “obscurer” (kun rdzob, saṃvṛti) or obstructor (sgrib byed) because a consciousness conceiving true existence, like an eye obstructed by an eye disease, obstructs itself from seeing suchness [or] this consciousness conceiving true existence veils other awarenesses from seeing suchness, like covering something with a cloth. This is because the Descent into Lankā Sūtra says:

The production of things [exists] conventionally (kun rdzob tu, saṃvṛtyā);
Ultimately it lacks inherent existence.
That [consciousness] mistaken regarding the lack of inherent existence
Is asserted as the obscurer of reality (yang dag kun rdzob, satyaṃ saṃvṛti).

...Since an artificial awareness in the continuum of a Proponent of True Existence arises from that consciousness conceiving true existence, all false things such as forms and so forth—which are the observed objects of such an artificial awareness that sees them displayed by that consciousness conceiving true existence as if they are truly existent—exist only conventionally, not ultimately. Not only does that artificial awareness arise from a consciousness conceiving true existence but also this consciousness conceiving true existence arises through the maturation of beginningless predispositions for mistake. This consciousness conceiving true existence displays truly established phenomena to all living beings as if they exist, whether their awarenesses are affected by systems of tenets or not, and those living beings also perceive them that way.
of true existence] arises through the maturation of beginningless predispositions for mistake, whereby all living beings see [phenomena] displayed as if they had an inherent nature in reality. Therefore, all entities of false things—[existing] through the power of those [sentient beings’ non-defective] thoughts [that is, conceptual and non-conceptual consciousnesses unaffected by superficial causes of mistake]—are said “only to exist conventionally.”

Ngag-wang-pal-dan’s reading strikes me as excessively complicated, but the matter requires more analysis.

a Four types of consciousnesses affected by superficial causes of mistake are enumerated:

• cause of mistake existing in the object: for instance, a consciousness perceiving a circle of fire due to a firebrand being twirled quickly
• cause of mistake existing in the basis: for instance, an eye consciousness that sees a single moon as double due to a fault in the eye
• cause of mistake existing in the abode: for instance, an eye consciousness that sees trees as moving when a person is riding in a boat (causing stationary objects on the shore to appear to move)
• cause of mistake existing in the immediately preceding condition: for instance, an eye consciousness that sees everything as red when a person is overcome by anger.

[In that quotation:] The passage “A mistaken awareness that superimposes—on things that in reality [or ultimately] are natureless—an aspect opposite to that [naturelessness]” refers to [a consciousness] mistaking what does not ultimately exist inherently to exist ultimately.

The passage “…is called an ‘obscurer’ (kun rdzob, samvṛti) because it obstructs [itself] from [perception of] suchness or because it veils [other awarenesses] from perception of suchness” is the meaning of “the obscurer of reality (yang dag kun rdzob, satyam samvṛti)” [in the quote from the Descent into Lāṅkā Sūtra]. Samvṛti [here] is taken as [meaning] “obstructor” (sgrib byed), obstructing reality.

Due to having arisen from a consciousness conceiving true existence, that which sees the display—by a consciousness conceiving true existence—as if [objects] are truly established is a conceptual consciousness, not a sense consciousness. For, Jñānagarbha’s a Autocommentary on “Differentiation of the Two Truths” b explains that true [existence]—the object of negation—does not appear to sense consciousnesses, and it is...

---

a Jñānagarbha is taken to be a proponent of the Sūtra Middle Way Autonomy School.

b bden pa gnyis rnam par ’byed pa ’i ’grel pa, satyadvayavibhāṅgavṛtti; sde dge 3882, dbu ma, vol. sa, Sb.3-6a.2; Tibetan and English in Eckel, Jñānagarbha’s Commentary, 160-161 and 75-76. Jñānagarbha states in his auto-commentary to stanza 8ab that “Imputed objects are production [existing] in reality, and so forth” (brtags pa ’i don ni yang dag par skye ba la sogs pa) and that “Production [existing] in reality, and so forth, do not appear” (yang dag par skye ba la sogs pa ni mi snang ste). In stanza 9ab, he states that “Since the negation of production, and so forth, is concordant with reality, we assert it” (skye la sogs pa bkag pa yang / yang dag pa dang mthun phyir ’dod). His auto-commentary explains “production” (skye) as “real production” (yang dag par skye ba), and that the negation of real production “we assert as the ultimate” (don dam pa yin par kho bo cag ’dod do). Put-
the same here [in Kamalashīla’s Yogic Middle Way Autonomy School].

The passage “Moreover, that [apprehension of true existence] arises through the maturation of beginningless predispositions for mistake” indicates that this apprehension of true existence is innate. Therefore, [Kamalashīla] speaks of “all living beings.”

The “thoughts” of those living beings are not just conceptual consciousnesses but also are to be taken as non-conceptual consciousnesses.

False things—that is to say, that do not exist ultimately but are posited as existing through the force of those two [conceptual and non-conceptual consciousnesses]—exist only conventionally. This is the meaning of the statement in the [Descent into Lankā Sūtra], “The production of things [exists] conventionally (kun rdzob tu, samrvītyā).” Moreover, this does not mean that [such falsities] exist conventionally in the sense of existing for a samrvīti (kun rdzob) that is an apprehender of true existence. [Rather, they exist for a samrvīti (kun rdzob) that is a conventional valid consciousness.]

Since this is the case, [in the Autonomy School] “to exist in the manner of an objective mode of abiding without being posited through appearing to an awareness, or through the force of an awareness” is to truly exist, to ultimately exist, and to exist as [the object’s own] reality, and apprehending such is an innate apprehension of true existence.

*tion these assertions together, one can see why Tsong-kha-pa states that Jñānagarbha’s object of negation—the negation of which is the ultimate—does not appear to sense consciousnesses.

a blo la snang ba ’am blo ’i dbang gis bzhag pa min par don gvi sdod lugs su yod pa.
Objection: Implicit to the statement in Kamalashīla’s Illumination of the Middle.\textsuperscript{a}

That “ultimately there is no production” is to be explained as that “the production of these is not established by a consciousness of reality.”

is an explanation that to be ultimately existent and ultimately produced is to be established—as existent and as produced—by a rational consciousness\textsuperscript{b} understanding suchness. [Since, just above, you have explained that the meaning of being ultimately existent is to exist in the manner of an objective mode of abiding without being posited through appearing to an awareness or through the force of an awareness,] how [do you take Kamalashīla’s explanation?]

Answer: That is true. You need to understand that the qualification “ultimately” is affixed in two ways to the object of negation:

1. Rational consciousnesses of hearing, thinking, and meditating are taken as the ultimate [consciousness], and what is not established by them [is not ultimately established, that is to say, not established for an ultimate consciousness], as described [by Kamalashīla just] above.
2. Existing in an objective mode of abiding without being posited through the force of an awareness is posited as [the meaning of] ultimately existing [and not existing this way is posited as the meaning of not being ultimately established].

The first of these two ultimates [that is, a rational consciousness

\textsuperscript{a} sde dge 3887, \textit{dbu ma}, vol. sa, 229b.3.

\textsuperscript{b} rigshes.
of hearing, thinking, or meditating], as well as something that is established in its perspective [namely, emptiness], exists. However, both the latter ultimate [that is, existence in an objective mode of abiding without being posited through the force of an awareness] and something that exists that way do not occur.\(^a\)

Therefore, although whatever exists ultimately in the latter sense would exist ultimately in the former sense,\(^b\) the apprehension of the former type of existence [that is, the apprehension that

\(^a\) Ngag-wang-pal-dan (Hopkins, *Maps of the Profound*, 743-744) rephrases this:

The “ultimate” in “not existing ultimately” has two types:

1. A conceptual rational consciousness of hearing, thinking, or meditating that analyzes suchness is taken as the ultimate, and not existing as able to bear analysis by that conceptual rational consciousness is posited as “not existing ultimately.”
2. Existing in an objective mode of subsistence without being merely posited through the force of appearing to a non-defective awareness is posited as “existing ultimately,” and not existing in that way is posited as “not existing ultimately.”

Concerning these:

1. Both the ultimate in the first mode of positing [that is, a conceptual rational consciousness analyzing suchness] and something established in its perspective [namely, emptiness] exist.
2. Both the ultimate of the second mode of positing [that is, existing in an objective mode of subsistence without being posited through the force of appearing to a non-defective awareness] and something established as it do not exist.

\(^b\) Ngag-wang-pal-dan (Hopkins, *Maps of the Profound*, 744-745) expands on this:

Whatever is established as the ultimate of the second mode of positing [that is, as existing in an objective mode of subsistence without being posited through the
an object is established for a rational consciousness] is not an innate apprehension of true existence.\textsuperscript{a} To have such an [innate] apprehension of true existence, one must apprehend the latter type of existence [that is, one must apprehend that an object has an objective mode of abiding not posited through the force of an awareness].

Not differentiating these [two meanings of “ultimate”], many have held that the measure of the object of negation is “that which is able to bear reasoned analysis”\textsuperscript{b} or “a thing able to bear analysis.”\textsuperscript{c} In dependence upon this, it appears that many mistakes asserting that ultimate truths are not established bases [that is, do not exist] or that ultimate truths are truly established have arisen. If these [facts] are understood well, you will understand the essential points that the statements that “[the noumenon] does not exist as [its own] basic disposition” and that “[the noumenon] does not exist ultimately”\textsuperscript{d} do not contradict the assertion that the noumenon\textsuperscript{e} exists and the proposition that it is the basic disposition [of phenomena] and is the ultimate.\textsuperscript{f}

\begin{itemize}
  \item force of an awareness] would [hypothetically] be established for the ultimate of the former mode of positing [that is, would be established in the perspective of a conceptual rational consciousness of hearing, thinking, or meditating that analyzes suchness] because whatever truly exists must be established as the final mode of subsistence, and whatever is established as the final mode of subsistence must be found by a rational consciousness examining the final mode of being.
  
  Whatever is established in the perspective of the former ultimate [that is, in the perspective of a conceptual rational consciousness] is not necessarily established as the latter ultimate [as existing in an objective mode of subsistence without being posited through the force of an awareness] because having analyzed whether or not something truly exists, a rational consciousness finds non-establishment of true existence, and it does not find true existence.
\end{itemize}

\textsuperscript{a} Emptiness is established for a rational consciousness but is not truly established, and the apprehension that any other phenomenon is established for such a rational consciousness is artificial and not innate.

\textsuperscript{b} rigs pas dpyad bzod.

\textsuperscript{c} dpyad bzod pa’i dngos po.

\textsuperscript{d} gshis lugs la dang don dam du med.

\textsuperscript{e} chos nyid, dharmatā.

\textsuperscript{f} Ngag-wang-pal-dan (Hopkins, Maps of the Profound, 745) gives more detail:

If these are understood well, you will know that it is not contradictory:

\begin{itemize}
  \item to say that something is not established as [its own] mode of disposition (gshis lugs su ma grub pa) and is not ultimately established
  
  \item and to assert that ultimate truths exist and to propound that ultimate truths
Indicating truth and falsity relative to worldly persons through the example of a magician’s illusion

Since for understanding the styles of existence posited and not posited through the force of an awareness, making these known in terms of the example of a [magician’s] illusion is praised, let us explain it. When a magician causes a pebble, twig, or the like to appear as a horse or elephant, there are three [types of persons present]:

1. the magician
2. the audience whose eyes have been affected [by the mantra the magician has cast]
3. [a person who comes later and thus] whose eyes have not been affected [by the mantra].

For the first [that is, the magician] there is the mere appearance as a horse or elephant, but he/she does not adhere to such [as being are the mode of subsistence and are ultimates.

Due to not distinguishing these, there arose explanations such as:

• The great translator Ngog [Lo-dan-shay-rab (blo ldan shes rab, rngog lo chen po, 1059-1109)], sole eye of the snowy land, said that ultimate truths are not objects of knowledge.
• The lord of reasoning Cha-pa Chö-kyi-seng-ge (cha pa or phywa pa chos kyi seng ge, 1109-1169) asserted that ultimate truths are truly established in the sense of being able to bear analysis by reasoning.
• Dro-lung-pa’s (gro lung pa blo gros 'byung gnas, eleventh century) Stages of the Teaching and so forth explain that through dividing one awareness by way of conceptually isolatable factors [it can be said that] there is no object of a rational consciousness, but there is an object of an inferential consciousness.
true]. The second [the audience whose eyes have been affected] have both the appearance [as horse or elephant] and adherence to that appearance. The third [a person whose eyes have not been affected] has neither the appearance as a horse or elephant nor adherence to it.

When, for example, a rope is mistaken as a snake, it is said that the rope is a snake in the perspective of that consciousness but in general is not a snake. However, it is not suitable to say that similarly, when a basis of conjuring appears as a horse or elephant, the appearance as a horse or elephant is only in the perspective of a mistaken consciousness but in general the basis of conjuring does not appear as a horse or elephant [because it does]. Even though that qualification [that is, “in general”] is not affixed, it must be asserted that the basis of conjuring does appear as a horse or elephant because if this were not the case, mistakes regarding appearances would not occur.

Therefore, that the basis of conjuring can be posited as appearing as a horse or elephant is, according to the magician, through the force of appearing that way to a mistaken awareness; it is not posited otherwise through the force of the mode of abiding of the basis of conjuring itself. As for the audience, the appearance as a horse or elephant does not seem to be posited through the force of an internal awareness; rather, they conceive that there is a fully qualified horse or elephant dwelling on that place where the appearance is, covering that spot.
In terms of the example, those are how something is apprehended to be posited through the force of an awareness and is apprehended not to be posited through the force of an awareness. When a basis [that is, an object] appears in a certain way, there are two [types]—those that do and do not correspond with the mode of subsistence in accordance with how it appears.

When you understand well this [presentation of how phenomena are posited through the force of awareness according to the Autonomy School], you will come to differentiate the two positions [of the Autonomy School and the Proponents of True Existence which some] confuse. They think:

Objects of comprehension [that is, all objects] are posited through the force of valid cognitions, and since valid cognitions are awarenesses, the positing of objects of comprehension through them is a case of positing [objects] through the force of an awareness. Hence, even the systems of the Proponents of True Existence refute true establishment.

[However,] that objects of comprehension are posited [that is, certified] through the force of valid cognitions means that valid cognitions realize the mode of abiding of the two [types of] objects of comprehension.\(^a\) Therefore, the two—this [meaning of positing or certifying objects of comprehension] and the former [meaning of positing objects through the force of an awareness according to the Autonomy School] are utterly dissimilar.

\(^a\) The two types of objects of comprehension are specifically and generally characterized objects, or impermanent and permanent objects, or manifest and hidden objects.
According to Yogic Middle Way [Autonomists, who do not assert external objects], the appearance of such an illusion is established [that is, certified] by a self-knowing direct perception, and according to [Sūtra Middle Way Autonomists], who assert external objects, the appearance of such an illusion is established [that is, certified] by a sense direct perception apprehending the basis—for instance, the area [on which the illusion appears] or intermediate space [in which it appears].

With respect to its not existing in accordance with how it appears, [that the illusory horse or elephant exists as it appears] is refuted with signs [that is, reasons] such as, “If it did exist that way, it would be seen by those whose eyes are not affected [by the mantra], but they do not see it,” and so forth. At this time, a combination of the two—appearing that way and an emptiness of that—is established, at which point [the illusion] is established as a falsity relative to an ordinary conventional awareness not involved in [philosophical] tenets. Hence, an awareness that establishes [or certifies] this [composite of appearance and emptiness] and a reflection’s emptiness of what it appears to be is not asserted to be either a coarse or a subtle rational consciousness.\(^b\)

Even if something is truly established in terms of a conventional ordinary awareness,\(^c\) if [an object] appears as that, it could not be empty of it, and also if it is empty of that, it could not appear that way. Hence, if a combination of those two [that is, appearing one way and existing another] occurs, it is only a falsity in terms

\(^b\) rigs shes. A coarse rational consciousness establishes a coarse selflessness, whereas a subtle rational consciousness establishes a subtle selflessness.

\(^c\) “True establishment in terms of a conventional ordinary awareness” does not refer to the object of negation as the term “true establishment” usually does but to something that is true on the conventional level. Even on the conventional level, if something is true, there will be no conflict between how it appears and how it is; it will not appear to be something and yet not be that, and correspondingly if it is empty of something, that is, if it is not something, it will not appear to be that. Therefore, a magician’s illusion, since it appears to be a real object and yet is not, cannot be true (or truly established) in a conventional sense of true establishment and thus must be a falsity, appearing one way and existing another.
of an ordinary awareness.

Explanation within applying the example to the meaning
When external and internal phenomena appear as truly existent, sentient beings, like the audience of magic whose eyes are affected [by the mantra cast by the magician], apprehend that there is a mode of subsistence of those phenomena not posited through the force of an awareness. This apprehension is the innate apprehension of true existence which has operated beginninglessly.

What the Autonomists posit this way is very coarse relative to the Consequentialists’ apprehension of the object of negation; hence, it is not the innate subtle apprehension of true existence [according to the Consequentialists].

When the true existence apprehended by the apprehension of true existence is refuted through reasoning, one—like the magician—does not apprehend external and internal phenomena as having a mode of abiding that is not posited through the force of
an internal awareness; rather, one understands [external and internal phenomena] as mere existents posited through the force of an awareness. Moreover, those posited through the force of an awareness that are not damaged by valid cognition are asserted as existing in conventional terms; however, everything posited through the force of an awareness is not asserted as existing in conventional terms.

Although the production of a sprout from a seed is posited through the force of an awareness, it is not contradictory that the sprout also is produced from the seed from its own side. This is like the fact that there is an appearance as a horse or an elephant even from the side of the basis of conjuring [that is, a pebble or twig]. Through this, all phenomena existing in conventional terms are to be understood.

Even the noumenon is posited as existing through the force of the awareness to which it appears. Hence, it is not an exception to being posited as existing in conventional terms.

Therefore, the significance of applying the example, a magician’s illusion, to the meaning—other phenomena—is not at all that just as a magician’s illusion appears to be a horse or an elephant but is empty of being such, so all [phenomena] such as pots and so forth appear to be pots and so forth, but are empty of being pots and so forth. For, if that were the case, being that phenomenon [for example, being a pot] would not occur, and the application of the example to the meaning would be that [phenomena] appear to be such-and-such but are not the actual thing.
When non-conceptual pristine wisdom of meditative equipoise is generated, in its perspective all dualistic appearances are quiescent. This is like one whose eyes, not having been affected [by the magician’s mantra], have neither the illusory appearance nor adherence to it.

Later [in Chandrakīrti’s text] there is no indication of the Autonomists’ uncommon modes of refuting [true existence] by reasoning; therefore, let us here express briefly and in a way easy to understand how through this system all phenomena are caused to appear as like a magician’s illusions.

Objects of knowledge are inclusively divided into the two: effective things and non-effective things [or impermanent and permanent phenomena]. Let us explain this with respect to effective things first. Effective things are inclusively divided into the physical and non-physical. Applying the refutation, as explained elsewhere, of physical things that are directionally partless—eastern direction, and so forth—and of consciousnesses that are temporally partless, [the Autonomists] prove that effective things necessarily have parts. Then, if parts and whole were different entities, they would be unrelated; thereby [a difference of entity of parts and whole] is refuted, and [parts and whole] are shown to be one entity.

At that time, no matter how the mind looks into it, it is undeniable that although the mode of being [of parts and whole] is to be one entity, in their mode of appearance [to thought] they appear to be different entities. Thereby, it is delineated that [effective things] are, like a magician’s illusions, a combination of the two—appearing one way and being empty of [existing] that way.
Then, although such is not contradictory in the context of the mode of abiding of a falsity posited through the force of appearing to an awareness, if a certain base [that is, a certain phenomenon] had a mode of subsistence not posited through the force of appearing to an awareness, [such a combination of appearance and emptiness] would not at all be reasonable because discordant modes of abiding and of appearance cannot occur in what is truly established, as was explained earlier, because if something is truly established, it must abide in a manner devoid of falsity in all respects and because [since appearance and mode of being would necessarily be concordant] the awareness to which [parts and whole] appear as different entities would have to be unmistaken, thereby damaging their being one entity.

Once this is established [with respect to effective things], in dependence on that reasoning it can be refuted that non-effective things are truly established. For, even with respect to uncompounded space, it must be asserted that it pervades certain physical objects, and regarding this it must be asserted that it has a part pervading the east and parts pervading the other directions. Likewise, the noumenon [or emptiness] also has many parts pervading [phenomena], as well as many different parts realized by different former and later awarenesses. Also, other uncompounded [phenomena] are similar. Therefore, since the two—the many parts and
the whole—are not fit to be different entities, they are one entity. Also, that [same discrepancy between modes of being and of appearance] is suitable in a falsity but not suitable in what is truly established. Hence, [the true establishment of uncompounded phenomena] is refuted as before [with compounded phenomena], whereby all objects of knowledge are established to be without true existence. Since this treatment is the assertion of the father Shāntarakṣhita and his spiritual son [Kamalashīla], reckoning part and whole only for effective things is a flaw of those with small intelligence.

The falsity renowned among those whose awarenesses have not been affected by tenets does not have the same meaning as the falsity asserted by the Middle Way School; therefore, although it is posited by an awareness, [this type of being posited by an awareness] is in accordance with how that is renowned to them. However, in the [Autonomists'] own system merely this is not asserted as [the meaning of being] posited by an awareness.

[Concluding remarks]
In that way, even though there is no mode of subsistence not posited by the force of appearing to an awareness, in this system it is not contradictory for there to be a mode of subsistence that is posited by the force of appearing to an awareness but is not merely
nominally imputed,\textsuperscript{d} whereas such is contradictory in the Consequence School. Hence, the objects of negation in the two Middle Way Schools come to differ greatly with regard to the perspective of the awareness [in the face of which objects are posited].\textsuperscript{e}

Having seen that contemporary persons—who have been briefly instructed well in [the Autonomists’] identification of true [existence] and [their estimation of] the apprehension of true existence as well as [their] reasonings refuting those—discern the Consequentialists’ view well when, afterwards, that system is taught, [I] have explained these here.

\textsuperscript{d} tu btags pa tsam min pa.
\textsuperscript{e} For the Autonomists the awareness is any consciousness, either conceptual or non-conceptual, not affected by superficial causes of mistake, whereas for the Consequentialists it must be only conceptual since everything is only imputedly existent.
\textsuperscript{f} This is also called “refutation of other systems” (gzhan lugs dgag pa).
\textsuperscript{g} Ngag-wang-leg-dan: Maitreya’s Ornament for the Clear Realizations and so forth.
by a rational consciousness is an object of negation, and that which withstands analysis by a rational consciousness and object found by that [rational consciousness] are [hypothetically]\(^h\) equivalent.

Our response: Well, it [absurdly] follows that the subject, the noumenon,\(^i\) is an object of negation because of being an object found by a rational consciousness analyzing the ultimate. You have asserted the entailment [that whatever is an object found by a rational consciousness analyzing the ultimate is necessarily an object of negation]. The reason [which is that the noumenon is an object found by a rational consciousness analyzing the ultimate] is established because Chandrakīrti’s Supplement to (Nāgārjuna’s) “Treatise on the Middle” says, “Objects of perceptions of reality are suchnesses.”

2. Also, someone says: The noumenon is not an object of knowledge because if something is an object of a rational consciousness, it becomes able

\(^{h}\) Here, “hypothetically” means holding an extreme for the sake of analysis (brtags pa mtha’ bzung)—hypothetical analysis. Since whatever is equivalent necessarily exists but nothing withstands analysis by a rational consciousness and nothing is found by a rational consciousness, when Jam-yang-shay-pa says that the latter two are equivalent, this is only hypothetically or heuristically stated. See Hopkins, Maps of the Profound: Jam-yang-shay-ba’s Great Exposition of Buddhist and Non-Buddhist Views on the Nature of Reality, 738.

\(^{i}\) Here, the term noumenon means the final reality, as this is its prime dictionary definition. Although this term is used to translate Kant’s “Ding an sich,” or “thing-in-itself,” that is not its meaning here.
to withstand analysis.

*Our response:* Well, it [absurdly] follows that it is not logically feasible for [Chandrakīrti] to say “Objects of perceptions of reality” because [according to you your] thesis [that the noumenon is not an object of knowledge] is logically feasible.

3. Moreover, the early sovereign of proponents of reasoning Cha-pa [Chö-kyi-seng-ge] and later Jo-nang-pa She-rab-gyal-tshan, Shākyachogyo,\(^{j}\) Go-ram-pa Sō-nam-seng-ge,\(^{m}\) and the [Eighth] Kar-ma-pa Mi-kyö-dor-je\(^{o}\) say: It follows that the noumenon is ultimately established because the measure of ultimately existing is taken to be “established as existent by a rational consciousness comprehending suchness,” because Kamalashīla’s *Illumination of the Middle* says:\(^{o}\)

    The statement that “Ultimately production does not exist” should be explained as “These are not established by a consciousness of reality as produced.”

---

\(^{j}\) phywa pa chos kyi seng ge, 1109-1169.
\(^{k}\) dol po pa skes rab rgyal mshan, 1292-1361.
\(^{l}\) shākya mchog ldan, 1428-1507.
\(^{m}\) go rams pa bsod nams seng ge, 1429-1489.
\(^{n}\) kar ma pa mi dkyod rdzogs, 1507-1554.
\(^{o}\) Kamalashīla, dbu ma snang ba, 229b.3.
Our response: [Kamalashīla’s saying in the *Illumination of the Middle*
“The statement that ‘Ultimately production does not exist’ should be ex-
plained as ‘These are not established by a consciousness of reality as pro-
duced’”] does not entail [that the measure of ultimately existing is taken
to be “established as existent by a rational consciousness comprehending
suchness”].

[Opponent:] It follows that [Kamalashīla’s saying in the *Illumination of
the Middle* “The statement that ‘Ultimately production does not exist’
should be explained as ‘These are not established by a consciousness of
reality as produced’”] entails [that the measure of ultimately existing is
taken to be taken as existent by a rational consciousness comprehending
suchness] because that scriptural passage [from Kamalashīla’s
*Illumination of the Middle*], having explicitly explained that the non-es-
tablishment of production and so forth as objects of a rational con-
sciousness is the meaning of their ultimate non-establishment, implicitly indi-
cates that the establishment of production and so forth as objects of a ra-
tional consciousness is the ultimate establishment of production and so
forth.
Our response: Nevertheless, [that this scriptural passage, having explicitly explained that the non-establishment of production and so forth as objects of a rational consciousness is the meaning of their ultimate non-establishment, implicitly indicates that the establishment of production and so forth as objects of a rational consciousness is the ultimate establishment of production and so forth] does not entail [that Kamalashīla’s saying in the Illumination of the Middle “The statement that ‘Ultimately production does not exist’ should be explained as ‘These are not established by a consciousness of reality as produced’”] entails that the measure of ultimately existing is taken to be “established as existent by a rational consciousness comprehending suchness”.

If you accept [that Kamalashīla’s saying in the Illumination of the Middle “The statement that ‘Ultimately production does not exist’ should be explained as ‘These are not established by a consciousness of reality as produced’”] entails that the measure of ultimately existing is taken to be “established as existent by a rational consciousness comprehending suchness”, it [absurdly] follows that it is reasonable to explain that, in the dispute about ultimately established or not ultimately established, (1) “the ultimate” is only a rational consciousness and (2) ultimately established or not ultimately established is only to be established or not to be established in the face of that rational consciousness because [according to you] your innermost assertion (zhe ’dod) [that the measure of ultimately existing is taken to be “established as existent by a rational consciousness comprehending suchness] is logically feasible.

—an alternative translation would be “requires.”

—That is, “means.”
If you accept [that it is reasonable to explain that, in the dispute about ultimately established or not ultimately established, (1) “the ultimate” in ultimately established or not ultimately established is only a rational consciousness and (2) ultimately being established or ultimately not being established is only to be established or not to be established in the face of that rational consciousness], it [absurdly] follows that phenomena ranging from forms through omniscient consciousnesses each are not similar in being ultimately non-established and being conventionally existent because [according to you] the eighteen emptinesses à are ultimately established. [You] have come to accept the reason [which is that the eighteen emptinesses are:]

À The eighteen emptinesses are:

1. emptiness of the internal, that is, of the five senses (nang stong pa nyid, adhyātmaśūnyatā)
2. emptiness of the external, that is, of the six types of objects which are the objects of the five senses and of the mental consciousness (phyi stong pa nyid, bahirdhāśūnyatā)
3. emptiness of the internal and external, that is, of the loci of the senses, the gross orbs of the eyes, and so forth (phyi nang stong pa nyid, adhyātma bahirdhāśūnyatā)
4. emptiness of emptiness, that is, of the emptiness that is the nature of phenomena (ston pa nyid stong pa nyid, śūnyatāśūnyatā)
5. emptiness of the great, that is, of the ten directions (chen po stong pa nyid, mahāśūnyatā).
6. emptiness of the ultimate, that is, of nirvāṇa (don dam pa stong pa nyid, paramārthaśūnyatā)
7. emptiness of the compounded (’dus byas stong pa nyid, samskṛtaśūnyatā)
8. emptiness of uncompounded (’dus ma byas stong pa nyid, asamskṛtaśūnyatā)
9. emptiness of what has passed beyond the extremes, that is, of what is free of the extremes of permanence and annihilation (mtha’ las ’dus pa stong pa nyid, atyantaśūnyatā)
10. emptiness of what is beginningless and endless, that is, of cyclic existence (thora dang tha ma med pa stong pa nyid, anavarāgrāśūnyatā)
emptiness are ultimately established].

You cannot assert [that phenomena ranging from forms through omniscient consciousnesses each are not similar in being ultimately non-established and being conventionally existent] because in the description that, without distinction, all phenomena are not ultimately existent, both “the ultimate” and “established ultimately” are nonexistent. It follows

11. emptiness of the indestructible, that is, of the indestructible Mahāyāna (dor ba med pa stong pa nyid, anavakārasūnyatā)
12. emptiness of nature, that is, of the emptinesses which are the nature of phenomena (rang bzhin stong pa nyid, prakṛtiśūnyatā)
13. emptiness of all phenomena, that is, of the eighteen constituents, etc. (chos thams cad stong pa nyid, sarvadharmaśūnyatā)
14. emptiness of definitions, that is, of the definitions of all phenomena from forms through to omniscient consciousnesses (rang gi mtshan nyid stong pa nyid, lakṣaṇaśūnyatā)
15. emptiness of the unapprehendable, that is, of the past, present, and future which are unapprehendable as the cessation of phenomena, their presence, and their non-production (mi dmigs pa stong pa nyid, anupalambahśūnyatā)
16. emptiness of the inherent existence of non-things, that is, of inherently existent non-products (dngos po med pa'i ngo bo nyid stong pa nyid, abhāvasvabhāśūnyatā)
17. emptiness of things, that is, of the five aggregates (dngos po med pa stong pa nyid, bhāvaśūnyatā)
18. emptiness of non-things, that is, of non-products (ngo bo nyid stong pa nyid, abhāvaśūnyatā).

See Hopkins, Meditation on Emptiness, 204-205.

a As will be explained below, here ultimate means “its own uncommon mode of abiding without being posited through the force of appearing to a non-defective awareness” (blo gnod med la snang ba'i dbang gis bzhag pa ma yin par rang gi mthun mong ma yin pa'i sdod lugs), and established ultimately means “established by way of its own uncommon mode of abiding without being posited through the force of appearing to a non-defective awareness” (blo gnod med la snang ba'i dbang gis bzhag pa ma yin par rang gi mthun mong ma yin pa'i sdod lugs kyi ngo bo nas grub pa).
It follows [that “the ultimate” and “established ultimately” must be taken as the “true establishment” that is drawn out by way of the opposite of “existent in conventional terms” of the Proponents of the Middle Way] because it is reasonable to posit that the object of apprehension of true existence is the meaning of “the ultimate” and that establishment as that [that is to say, as truly existent] is the meaning of “established ultimately,” because a Mother Sūtra [a Perfection of Wisdom] says:

Moreover, Bodhisattvas, Mahāsattvas, in dependence on imputation by the world will manifestly and completely bring about the full purification of unsurpassable thoroughly complete enlightenment, but, ultimately, whatsoever deeds in order to achieve enlightenment [and] forms (gzugs, rūpa), feelings (tshor ba, vedaṇā), discriminations (’du shes, samjñā), compositional factors (’du byed, saṃskāra), and consciousnesses (rnam par shes pa, vijñāna) do not even slightly exist. Likewise, the eighteen constituents, the six contacts,…the four fruits, the knowledge of the path (lam shes pa, margajñāna), and even the unsurpassable thoroughly complete enlightenment do not exist; for all these phenomena are imputed depending upon worldly conventions, but not ultimately.”
This passage from a Mother Sūtra entails that [it is reasonable to posit that the object of apprehension of true existence is the meaning of “the ultimate” and that establishment as that (that is to say, as truly existent) is the meaning of “established ultimately,”] because this scriptural passage [from a Mother Sūtra] describes—as ultimate existence—existence that is not existence in conventional terms, and one should differentiate that “both such an ultimate and establishment that way do not exist, but both ‘the ultimate’ when a rational consciousness is taken as the ultimate and its objects’ establishment in the face of that ultimate exist.”
It follows [that this scriptural passage from a Mother Sūtra describes—as ultimate existence—existence that is not existence in conventional terms, and one should differentiate that “both such an ultimate and establishment that way do not exist, but both ‘the ultimate’ when a rational consciousness is taken as the ultimate and its objects’ establishment in the face of that ultimate exist”] because if one does not know how to differentiate such, those previous fallacies come,

because Tsong-kha-pa’s Explanation [of (Chandrakīrti’s) “Supplement to (Nāgarjuna’s) ‘Treatise on the Middle’”] says:a

You need to understand that the qualification “ultimately” is affixed in two ways to the object of negation:

1. Rational consciousnesses of hearing, thinking, and meditating are taken as the ultimate [consciousness], and what is not established by them [is not ultimately established, that is to say, not established for an ultimate consciousness], as described [by Kamalashīla just] above.

2. Existing in an objective mode of abiding without being posited through the force of an awareness is posited as [the meaning of] ultimately existing [and not existing this way is posited

---

a Hopkins, Tsong-kha-pa’s Final Exposition of Wisdom, 193.
as the meaning of not being ultimately established].

The first of these two ultimates [that is, a rational consciousness of hearing, thinking, or meditating], as well as something that is established in its perspective [namely, emptiness], exists. However, both the latter ultimate [that is, existence in an objective mode of abiding without being posited through the force of an awareness] and something that exists that way do not occur. Therefore, although whatever exists ultimately in the latter sense would exist ultimately in the former sense, the apprehension of the former type of existence [that is, the apprehension that an object is established for a rational consciousness] is not an innate apprehension of true existence. To have such an [innate] apprehension of true existence, one must apprehend the latter type of existence [that is, one must apprehend that an object has an objective mode of abiding not posited through the force of an awareness].

Not differentiating these [two meanings of “ultimate”], many have held that the measure of the object of negation is “that which is able to bear reasoned analysis” or “a thing able to bear analysis.” In dependence upon this, it appears that many mistakes asserting that ultimate truths are not established bases [that is, do not exist] or that ultimate truths are truly established have arisen. If these [facts] are understood well, you will understand the essential points that the statements that “[the noumenon] does not exist as [its own] basic disposition” and that “[the noumenon] does not exist ultimately” do not contradict the assertion that the noumenon exists and the proposition that it is the basic disposition [of phenomena] and is the ultimate.\(^b\)

\(^b\) The ellipsis (zhes pa nas) in Jam-yang-shay-pa’s text is replaced with the actual content from Tsong-kha-pa’s text. The Tibetan: Tsong-kha-pa-blo-bzang-grags-pa, dgongs pa rab gsal, 131:15-132:8.
Knowing that on the occasions of both the Autonomy and the Consequence schools there are two modes of positing the ultimate in “ultimately not existent” is very important... Both [that is to say, in the description that, without distinction, all phenomena are not ultimately existent, both “the ultimate” and “ultimately established”] do not exist.

4. Also, another partisan\(^d\) says: It follows that it is not logically feasible...
that the measure of ultimate establishment is not clearly explained in reliable texts of the Autonomy School except for Kamalashīla’s *Illumination of the Middle* because both the measure of conventional establishment and the measure of ultimate establishment are indicated by this statement in Jñānagarbha’s *Differentiation of the Two Truths*:

Only these appearances to awarenesses are Conventional; the others are the counterpart.

Moreover, Je-drung Shay-rab-wang-po’s [work] on the Middle [that is, *General Meaning of the Middle; Further Clarification of the Thought of (Chandrakīrti’s) “Supplement”*] says, “Such a teaching is good,” but some of our own later scholars have said “[This should be] analyzed.”

According to Jam-yang-shay-pa, “cig shos, counterpart” is the counterpart of conventional truths, that is, ultimate truth. However, for the opponent, “cig shos, counterpart” is the counterpart of appearances (snang ba), that is, the non-appearing. Hence, the opponent thinks that these two lines say that the measure of ultimate establishment (don dam par grub tshad) does not appear to shepherds and above. This means that the object of negation does not appear to their sense consciousnesses.

---

c bden gnyis rnam par 'byed pa, satyadvayavibhāṅga.
f According to Jam-yang-shay-pa this half stanza means:

Only these appearances to awarenesses are Conventional [truths]; the others are the counterpart [that is to say, ultimate truths].

According to Jam-yang-shay-pa, “cig shos, counterpart” is the counterpart of conventional truths, that is, ultimate truth. However, for the opponent, “cig shos, counterpart” is the counterpart of appearances (snang ba), that is, the non-appearing. Hence, the opponent thinks that these two lines say that the measure of ultimate establishment (don dam par grub tshad) does not appear to shepherds and above. This means that the object of negation does not appear to their sense consciousnesses.

g rje drung shes rab dbang po, 1500-1586; a direct disciple of Se-ra Je-tsün Chö-kyi-gyal-tshan (se ra rje btsun chos kyi rgyal mishan, 1469-1544).
h dbu ma’i spyi don dgongs pa yang gsal, TBRC W14081. For a detailed introduction with table of contents see Tshul-khrim-bsKal-bzang, *An Introduction to rJe drung Shes rab dbang po’s dGongs pa yang gsal: A Textbook (yig cha) for the Study of Madhyamaka of Byes pa College of Se ra Monastery*, Otani University Collection No. 13957 (Kyoto: Rinsen Book Co., 1992).
Our response to that: Well then, it [absurdly] follows that the statement in that passage “Only these appearances to awarenesses are/ Conventional” explains that “The conventionally established are only appearances to awarenesses of shepherdesses and above,” and the remainder [that is, “the others are the counterpart”] indicates that the measure of ultimate establishment does not appear to shepherdesses and so forth because [according to you] those “awarenesses” are taken to be awarenesses of shepherdesses and above, and the counterpart of “appearances (snang)” is taken to be the non-appearing (mi snang ba) [to shepherdesses and so forth], and those two [parts of Jñānagarbha’s statement] are taken as the two measures of establishment by you. It is easy to establish the reason [which is that according to you those “awarenesses” are taken to be awarenesses of shepherdesses and above, and the counterpart of “appearances” is taken to be the non-appearing to shepherdesses and so forth, and those two parts of Jñānagarbha’s statement are taken as the two measures of establishment by you].
above, and…,” and the remainder [that is, “the others are the other ones”] indicates that the measure of ultimate establishment does not appear to shepherdesses and so forth, it [absurdly] follows that shepherdesses and so forth have already been released because [according to you] not any phenomena appear to those [shepherdesses and above] as truly established.

You have asserted the three spheres [of self-contradiction].

Also, it [absurdly] follows that those [shepherdesses and so forth] have already found the view of the Middle because all phenomena appear to those [shepherdesses and so forth] as established in conventional terms. You have asserted the three spheres [of self-contradiction].

Also, it [absurdly] follows that that passage [in Jñānagarbha’s *Differentiation of the Two Truths*] is not a passage identifying obscurational/conventional truths and ultimate truths because [according to you] that passage is to be associated with the two measures of establishment [that is, the measure of conventional establishment and the measure of ultimate establishment]. You have accepted the reason [which is that that passage is to be associated with the two measures of establishment, that is, the measure of conventional establishment and the measure of ultimate establishment].
If [that passage is to be associated with the two measures of establishment, that is, the measure of conventional establishment and the measure of ultimate establishment.] does not entail [that that passage in Jñānagarbha’s *Differentiation of the Two Truths* is not a passage identifying conventional truths and ultimate truths], it very absurdly follows that whatever is established as being an ultimate truth must be truly established! You cannot accept the root [consequence that that passage [in Jñānagarbha’s *Differentiation of the Two Truths*] is not a passage identifying obscurational/conventional truths and ultimate truths] because [Jñānagarbha]:

1. indicates the purpose with one stanza:\textsuperscript{i}
   
   Those who know the differentiation of the two truths  
   [Are not obscured with regard to the Sage’s teaching.  
   Having entirely accumulated the collections (of merit and wisdom),  
   They will just go to the marvelous other side.]

2. and then indicates the mode of teaching with:
   
   The Sage spoke of the conventional and the ultimate  
   As the two truths.

3. and then indicates the identification of the two truths with:
   
   Only these in accordance with how they appear  
   Are conventional; the others are the counterpart.

\textsuperscript{i} Jñānagarbha, *bden pa gnyis rnam par 'byed pa'i tshig le'u byas pa (satyadvayavibhanagārīkā)*, in *bstan 'gyur (sde dge)*, TBRC W23703, 107 (Delhi, India: Delhi Karmapa choedhey, Gyalwae sungrab partun khang, 1982-1985). 1a.2-1a.3.
The first reason [which is that Jñānagarbha indicates the purpose with one stanza:

Those who know the differentiation of the two truths
Are not obscured with regard to the Sage’s teaching.
Having entirely accumulated the collections [of merit and wisdom],
They will just go to the marvelous other side.]

is easy [to establish.] The second reason [which is that Jñānagarbha indicates the mode of teaching with:

The Sage spoke of the conventional and the ultimate
As the two truths]

is established because Jñānagarbha’s Auto-commentary says:

[With respect to the statement in the root text “The Sage spoke of the conventional and the ultimate as the two truths,”] “here and there in Buddhist scriptures” is an extra phrase [that is to be added to that statement.]

and Shāntarakṣhita’s Commentarial Explanation of (Jñānagarbha’s) “Differentiation of the Two Truths” says:

Through the general term “here and there” [Jñānagarbha] indicates that [the teaching of two truths occurs] in many sūtras.

j Ibid., 1a.5-1a.6.
k Ibid., 1a.3-1a.4.
l Ibid., 4a.2.
m This passage is not from Jñānagarbha’s autocommentary, but from Shāntarakṣhita’s Commentary on the Difficult Points in (Jñānagarbha’s) “Differentiation of the Two Truths.” See Śāntarakṣita, *bden pa gnyis rnam par 'byed pa'i dka` 'grei (satyadvaya-vibhanga-parijñā),* in *bstan 'gyur (sde dge),* TBRC W23703.107 (Delhi, India: Delhi Karmapa choedhey, Gyalwae sungrab partun khang, 1982-1985), 17b.3.
The third [reason which is that Jñānagarbha indicates the identification of the two truths with:

Only these in accordance with how they appear
Are conventional; the others are the counterpart.]

is established because Shāntarakṣhita’s Commentarial Explanation of (Jñānagarbha’s) “Differentiation of the Two Truths” says:¹

With respect to teaching the meaning of the differentiation of the two truths, the teaching “Only these appearances to awarenesses” is for the sake of indicating that “[These appearances] are not in exact accordance with reasoning [Jñānagarbha’s] statement of “Conventionalities” means conventional truths (kun rdzob bden pa) because a final term [that is, bden pa] is drawn forth from within it [that is, kun rdzob]. “Others” are other than the mode of appearance. Therefore, this indicates “exact accordance with reasoning, ultimate truth.”

and Jñānagarbha’s Auto-commentary also says:²

Only these in accordance with how they appear
Are conventional; the others are the counterpart.

[“The others” (relative to conventional truths)] is the equivalent of saying ultimate truth. Whatever shepherdesses and above see abide as true conventionally in that way, but not really.

That is very easy to realize.

¹ Ibid., 17b.3-17b.4.
² Jñānagarbha, bden gnyis rnam ’byed pa’i ’grel pa, 4a.2-4a.4.
5. Also, someone says: With respect to forms and so forth, whatever is the true establishment that is the object of negation in “ultimately not existing” appears to sense consciousnesses.

Our response: Well, it [absurdly] follows that even the ultimate production of forms and so forth in the face of a rational consciousness appears to sense consciousnesses because [according to you] the production of forms
and so forth in terms of both ultimates [as apprehended by an artificial apprehension of true existence and by an innate apprehension of true existence] appears to sense consciousnesses.

It [absurdly] follows [that the production of forms and so forth in terms of both ultimates (as apprehended by an artificial apprehension of true existence and by an innate apprehension of true existence) appears to sense consciousnesses] because [according to you] your thesis [that with respect to forms and so forth, whatever is the true establishment that is the object of negation in “ultimately not existing” appears to sense consciousnesses] is logically feasible. [However,] you cannot assert [that the production of forms and so forth in terms of both ultimates (as apprehended by an artificial apprehension of true existence and by an innate apprehension of true existence) appears to sense consciousnesses] because the distinction is explained that the five forms and so forth and the five true establishments of those five appear to the individual sense consciousnesses but the five real productions of those [five forms and so forth] and the five productions of true establishment in the face of a rational consciousness do not [appear to the five sense consciousnesses], because Jñānagarbha’s Auto-commentary on the “Differentiation of Two Truths” says, “Real production and so forth do not appear, when things appear,” and Tsong-kha-pa’s Explanation says:

Jñānagarbha’s Auto-commentary on “Differentiation of the Two Truths” explains that true [existence] that is the object of negation does not appear to sense consciousnesses, and it is the same here [in Kamalashīla’s Illumination of the Middle].
This [true existence that is the object of negation] is done in terms of true establishment in the face of a rational [consciousness] because in the case of negating true establishment in the texts of the Autonomy School, production and so forth that is truly established in the face of a rational [consciousness] is negated,

because Tsong-kha-pa’s The Essence of Eloquence says:

Concerning this, in commentary on the statement that earth and so forth are not ultimately entities of the elements Bhāvaviveka’s Blaze of Reasoning says:

With respect to artha [in the compound paramārtha] because of being an object of knowledge [or something that is known], it is an object (artha)—this being synonymous with “object of analysis” and “object to be understood.”

---

p Translation by Jeffrey Hopkins, Emptiness in the Autonomy School of Buddhism, unpublished manuscript, 53. The material at the beginning of this citation from Tsong-kha-pa’s The Essence of Eloquence quoting Bhāvaviveka’s Blaze of Reasoning is added to Jam-yang-shay-pa’s citation for context; it is from Tsong-kha-pa, drang nges legs bshad snying po (sku ‘bum: Sku ‘bum Byams pa gling Par khang, 2000?), 64b.6-65a.2. The ellipsis in Jam-yang-shay-pa’s own citation has been filled in from the same, 65a.2-65a.5.
Parama (highest) is a term for “supreme.” With respect to the compound paramārtha (highest object), because of being an object and also being highest, it is the highest object (paramārtha).

Or, in another way, [paramārtha means] the object of the highest (paramasya artha). Because of being the object of the highest non-conceptual pristine wisdom, it is the object of the highest (paramārtha).

Or, in another way, [paramārtha means] that which is concordant with the ultimate. Since the wisdom concordant with [direct] realization of the highest object [that is, the ultimate, emptiness,] has that highest object, it is concordant with the highest object [that is to say, the highest wisdom].

From among these three that [Bhāvaviveka] mentions, the last is the meaning on this occasion [of refuting that the elements, for instance, do not ultimately exist, that is to say, that the elements do not exist for an ultimate rational consciousness or, more strictly, are not established as able to bear analysis by an ultimate rational consciousness].

Bhāvaviveka’s Blaze of Reasoning says:

The ultimate [that is to say, the highest consciousness] is of two types. One is the uncontaminated supramundane [consciousness] that operates without [conceptual] activity and is without the proliferations [of dualism]. The second is called “mundane pristine wisdom (ye shes)” which operates together with [conceptual] activity, is a concordant [result] of the collections of merit and wisdom, and involves the proliferations [of dualism]. Here, that [latter
type] is held as the qualification ["ultimately"] in the thesis [that earth and so forth ultimately do not exist as entities of the elements].

A rational consciousness analyzing the ultimate also must be asserted as that [ultimate in “ultimately does not exist”]; it is not just a Superior’s rational consciousness attained subsequent to meditative equipoise. In that case, the meaning of the statement that a basis—that Proponents of the Middle Way and others analyze whether it ultimately exists or not—“does not exist ultimately” is that it does not exist in the perspective of a rational consciousness analyzing the ultimate with respect to that base; [it means that] it is not established by that [rational consciousness].

Anything clearer than that [identification of the object of negation in Bhāvaviveka’s Blaze of Reasoning] is not set forth in the scope of the texts by this master [Bhāvaviveka]. Also, a clear identification does not appear in the scope of the master Jñānagarbha’s [Differentiation of] the Two Truths and Shāntarakṣita’s Ornament for the Middle as well as his own commentary.

---

9 “Scope” (skor) includes Jñānagarbha’s own commentary.
Such an object of negation does not appear to sense consciousnesses because an ultimate established by that [rational consciousness would be] treated as the mode of subsistence.

6. Also, someone says: Even the Autonomists assert that all phenomena are merely imputed by conceptuality.

Our response: That [even the Autonomists assert that all phenomena are merely imputed by conceptuality] is not logically feasible because:

1. these [Autonomists] assert that all phenomena, within not being merely imputed by conceptuality, are established from their own side;
2. also they assert that although [all phenomena] are posited by the power of appearing to awareness, there is no contradiction that [all phenomena] are not merely imputed by terms and conceptual consciousnesses (sgra rtog);
3. also they assert that all phenomena, within not being merely imputed by names, are found through being sought [by analysis];
4. also they do not accept that cause, effect, and so forth are existent in the sense of being posited by the power of nominal conventions.
The first reason [which is that these Autonomists assert that all phenomena, within not being imputed by conceptuality, are established from their own side] is established because Tsong-kha-pa’s *Answers to Questions by Jang-chub Lama* says:

Since Middle Autonomists assert objects that are established by way of their own character even in conventional terms (*tha snyad du*), the meaning of not being merely imputed by conceptuality is complete even in their system’s [assertion of] illusion empty of true existence.

The second reason [which is that they assert that although all phenomena are merely posited by the power of appearing to awareness, there is no contradiction that all phenomena are not merely imputed by terms and conceptual consciousnesses] is established because Tsong-kha-pa’s *Explanation [of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the...
Middle’’” says:\textsuperscript{8}

In that way, in this system even though there is no mode of subsistence not posited by the force of appearing to an awareness, it is not contradictory for there to be a mode of subsistence that is posited by the force of appearing to an awareness but is not merely nominally imputed [whereas such is contradictory in the Consequence School].

The third reason [which is that they assert that all phenomena, within not being merely imputed by names, are found through being sought] is established because Tsong-kha-pa’s *Ocean of Reasoning* says:

Because Autonomists assert that the mere mode of analysis above is not an analysis of [an object’s] being established as [its own] suchness, they also assert that objects sought in that way exist.

The fourth reason [which is that they do not accept that cause, effect, and so forth are existent in the sense of being posited by the power of nominal conventions] is established because [Tsong-kha-pa] says in the same text:

\textsuperscript{8} Adapted from Hopkins, *Tsong-kha-pa’s Final Exposition of Wisdom*, 200.
Cause, effect, and so forth are not asserted as being existent in the sense of being posited by the power of nominal conventions.

7. With regard to that, someone says: It follows that [Autonomists] do not assert that the term “only” (tsam) in “only imputed by names” (ming gis btags tsam) eliminates the two, “own-character” and “establishment from its own side” because even the Proponents of Mind-Only School assert that the term “only” [in “only imputed by names”] does not eliminate “establishment from its own side.”

Our response: [That even the Proponents of Mind-Only assert that the term “only” does not eliminate “establishment from its own side”] does not entail [that Autonomists do not assert that the term “only (tsam)” in “only imputed by names” (ming gis btags tsam) eliminates the two, “own-character” and “establishment from its own side.”] and you cannot accept [that Autonomists do not assert that the term “only” (tsam) in “only imputed by names” (ming gis btags tsam) eliminates the two, “own-character” and “establishment from its own side”] because having negated the mode of assertion of the Mind-Only School, Bhāvaviveka indicates (1) that imputation as truly established is the entity of character that is nonexistent and (2) that being only posited by names and terminology as truly established is the meaning of imputational [natures] being posited by names and terminology.
It follows [that having refuted the mode of assertion of the Mind-Only School, Bhāvaviveka indicates (1) that imputation as truly established is the entity of character that is nonexistent and (2) that being only posited by names and terminology as truly established is the meaning of imputational (natures) being posited by names and terminology] because, as explained in the section on Bhāvaviveka’s assertions, Tsong-kha-pa’s *The Essence of Eloquence* says:¹

At that time [that is, therefore,] the imputational natures—about which [the *Sūtra Unraveling the Thought*] says “imputational natures are character-non-natures”—are the conceived objects [such as form and the production of form] thoroughly imputed to be ultimate[ly existent]. That [the *Sūtra Unraveling the Thought*] says that these are posited by name and terminology means that [these nonexistent imputational natures] are exhausted as only imputed by terms and conceptual consciousnesses.

Shāntarakṣhita and his spiritual son [Kamalashila] also assert like what Tsong-kha-pa said. [Kamalashila’s] Illumination of the Middle says: a

With regard to other-powered natures (gzhan gyi dbang gi ngo bo nyid) which are not different from illusions and so forth, whatsoever superimpositions of permanence, impermanence, and so forth as ultimate entities are imputational natures. Also because these [other-powered natures] are not established in accordance with the imputational character, [imputational natures] are posited as character-non-natures.

8. With regard to that, someone says: It follows that [in the system of the Autonomists] there are phenomena only imputed by names because forms and so forth are [phenomena only imputed by names] because:

• Haribhadra’s Clear Meaning Commentary says, b

---

a Kamalashila, dbu ma snang ba (madhyamakāloka), in bstan ’gyur (sde dge), TBRC W23703.107 (Delhi, India: Delhi Karmapa coedhey, Gyalwae sungrab partun khang, 1982-1985), 151a.2-151a.3.
b Haribhadra, shes rab kyi pha rol tu phyin pa ’i man ngag gi bstan bcos mgon par riogs
All phenomena ranging from forms to Buddhas are conventional phenomena (chos tha snyad pa) that are terminologically imputed.

- and Mother Sūtras [Perfection of Wisdom Sūtras] say:
  Forms are adventitiously imputed by names…exalted-knowers-of-all-aspects are adventitiously imputed by names.

- and Haribhadra’s Great Commentary (’grel chen) says:
  All these phenomena are only names, From [their] mere appearance they do not have inherent existence.

Our response: [The above statements] do not entail [that forms and so forth are phenomena only imputed by names] because:

1. the first scriptural passage [Haribhadra’s Clear Meaning Commentary]
tary] explains that phenomena are imputed with conventions by terminology, but does not explain that [phenomena] are only imputed with conventions

(2) and the meaning of the sūtra passage is that “Forms and so forth are adventitiously only imputed by names as truly established” because it is necessary to explain that since [forms and so forth] from the first are not truly established, [the imputation of true establishment] is adventitious, and [forms and so forth] are only posited by names and terminology as truly established, since Āryavimuktasena’s Ascertainment of the “Twenty-Five Thousand Stanza Perfection of Wisdom Sūtra” says:

That from the very first [forms and so forth] are natureless [means that they are] adventitiously arisen. Terminological imputation is nominal imputation.

9. Moreover, someone says: If [something] does not appear as horses and elephants, it is necessarily the case that appearances [that is, perceptions] as horses and elephants do not exist.

Our response: It [absurdly] follows that with respect to the subjects, ob-
jects of knowledge, appearances [that is, perceptions] as horses and ele-
phants do not exist because of not appearing as horses and elephants. You
have accepted the entailment [that if something does not appear as horses
and elephants, it is necessarily the case that appearances (that is, percep-
tions) as horses and elephants do not exist].

If you say that it is not established [that objects of knowledge do not appear
as horses and elephants], then it [absurdly] follows that whatever is selfless
must appear as horses and elephants because [according to you] it is not
established [that objects of knowledge do not appear as horses and ele-
phants].

If you accept the root [consequence that appearances (that is, perceptions)
as horses and elephants do not exist], it [absurdly] follows that a
conceptual consciousness apprehending objects of knowledge as h orses
and elephants does not exist because you have accepted [that appearances
(that is, perceptions) as horses and elephants do not exist]. If you accept
[that a conceptual consciousness apprehending an object of knowledge as
horses and elephants does not exist], it very [absurdly] follows that the
possibility [or border] of mistake has been blocked.

Moreover, it [absurdly] follows that with respect to the subject, the
noumenon, appearance [that is, perception] as truly established does not
exist because of not appearing as truly established. You have accepted [that
not appearing as truly established] entails [that appearance (that is, percep-
tion) as truly established does not exist].
If you say that it is not established [that the noumenon does not appear as truly established], it [absurdly] follows that the subject, [the noumenon,] is not established in accordance with its appearance because [according to you] it is not established [that the noumenon does not appear as truly established]. If you accept [that the noumenon is not established in accordance with its appearance], it [absurdly] follows that that subject, [the noumenon,] is not a truth because you have accepted [that the noumenon is not established in accordance with its appearance]. [Not being established in accordance with its appearance] entails [not being a truth] because the difference between truth and falsity must be posited by whether the phenomenon is established or not in accordance with its mode of appearance. If you accept the root [consequence that with respect to the noumenon, appearance (that is, perception) as truly established does not exist], it very absurdly follows that apprehension of the noumenon as truly established does not exist.

10. Moreover, someone says: The lack of being either one truth or many truths is a correct sign proving that a sprout is truthless.
Our response: Well then, it [absurdly] follows that it is unreasonable to individually posit one truth and many truths because [according to you] the thesis [that the lack of being either one truth or many truths is a correct sign proving that a sprout is truthless] is logically feasible. You cannot accept [that it is unreasonable to individually posit one truth or many truths] because (1) the noumenon of a pot is one truth and (2) the noumena of a pillar and a pot are many truths. The first [part of the] reason [which is that the noumenon of a pot is one truth] is established because [the noumenon of a pot] is a common locus of truth and one. It follows [that the noumenon of a pot is a common locus of truth and one] because truth and one are not contradictory. (2) The second [part of] the reason [which is that the noumena of a pillar and a pot are many truths] is established because [the noumena of a pillar and a pot] are a common locus of truth and many. It follows [that the noumena of a pillar and a pot are a common locus of truth and many] because of being a common locus of truth and two.
11. Moreover, with regard to statements by the omniscient Khay-drub and so forth that the lack of being either truly established one or many is a correct sign—proving only a convention—that proves persons as truthless, someone states a qualm by the supreme scholar-monk Jamyang-leg-chö-pa. Well then, it [absurdly] follows that that a person is not established as either truly established one with or discrete from the aggregates is the meaning of the truthlessness of a person because non-establishment in that way is a correct sign proving conventions that proves [the truthless of a person]. You have accepted the reason [which is that non-establishment in that way is a correct sign proving conventions that proves the truthless of a person]. If you accept [the consequence that that a person is not established as either truly established one with or discrete from the aggregates is the meaning of the truthlessness of a person], it [absurdly] follows that that a person is not truly established one with the aggregates is the meaning of a person’s truthlessness because you have accepted [that that a person is not established as either truly established one with or discrete from the aggregates is the meaning of the truthlessness of a person].

\[\text{bden med/ bden par ma grub pa}\]

\[\text{“Truthless” (bden med/ bden par ma grub pa) means “without true existence,” or its equivalent “without true establishment” (bden par ma grub pa).}\]

\[\text{jam dbyangs legs pa, 15th century C.E.}\]
Our response: At this point, [that a person is not established as either truly established one with or discrete from the aggregates is the meaning of the truthlessness of a person] does not entail [that a person is not truly established one with the aggregates is the meaning of a person’s truthlessness]. If you accept [that that a person is not truly established one with the aggregates is the meaning of a person’s truthlessness], it very absurdly follows that that sound is not established as one with permanence is the meaning of sound’s emptiness of permanence.

12. Furthermore, someone says: Therefore, the nonexistence of truly established one and the nonexistence of truly established many is not the meaning of truthlessness.
subsistence of one does not exist], it follows that [that the mode of subsistence of one does not exist] is not logically feasible because in the context of the objects of uncontaminated meditative equipoise of Superiors, all eight—ranging from no production, no cessation to no plural meaning and no singular meaning—in those objects [of uncontaminated meditative equipoise of Superiors]—are the mode of subsistence.

Nāgārjuna at the beginning of his *Fundamental Stanzas on the Middle Called “Wisdom”* makes an expression of worship to the Buddha who taught dependent-arising as qualified by eight negations:

Homage to the perfect Buddha,
The best of propounders,
Who taught that what dependently arises
Has no cessation, no production,
No annihilation, no permanence,
No coming, no going,
No difference, no sameness,
Is free from proliferations, and at peace.

Cessation, production, annihilation, permanence, coming, going, plural, and singular (the latter two being one and many) do not exist in the face of meditative equipoise realizing emptiness. Using Middle Way reasonings to search for objects, they are not found; thus in meditative equipoise, all dependent-arisings are seen as without production and so forth; this means that in general they lack truly existent production and so forth. Adapted from Hopkins, *Where Is the Middle? Two Views of Reality in the Middle Way: The Autonomy and Consequence Schools*, unpublished manuscript, 27.
because:

Chandrakīrti’s *Clear Words* says:\(^d\)

> Now because those conventional dependent-arisings themselves are not inherently produced, in the context of Superiors’ pristine wisdom they are qualified with the eight distinctive features of no cessation and so forth, ranging from “They do not have cessation” to “They do not have singular meaning.”

and the *Buddhapālita [Commentary]* says:\(^e\)

> […] the supremely profound ultimate truth—no cessation, no production, no annihilation, no permanence, no coming, no going, no different factualities, and no single factuality […]

and Tsong-kha-pa’s *Ocean of Reasoning* says:\(^f\)

> in the context of the nature of the objects of uncontaminated meditative equipoise

---

Jam-yang-shay-pa’s citation differs a little from this edition:
and so forth.

These three statements entail [that in the context of the objects of uncontaminated meditative equipoise of Superiors, all eight—ranging from no production, no cessation through to no plural meaning and no singular meaning in those objects (of uncontaminated meditative equipoise of Superiors)—are the mode of subsistence] because there exist an exclusionary elimination (rnam bcad, viccheda) and an inclusionary elimination (yongs bcad, pariccheda) in the mention—by those scriptural passages—of “conventional” [in “conventional dependent-arisings” in Chandrakīrti’s Clear Words] and “ultimate” [in “the supremely profound ultimate truth” in the Buddhapālita Commentary].
Moreover, it follows that—with regard to the subject, all eight such as production, cessation, and so forth—the nonexistence of these in the perspective of the uncontaminated meditative equipoise of Superiors is their mode of subsistence because they are conventionalities. If [you say that its being a conventionality] does not entail [that its nonexistence in the perspective of uncontaminated meditative equipoise of Superiors is its mode of subsistence], this contradicts many sūtras and treatises of definitive meaning such as the Verse Summary [of the Perfection of Wisdom] Sūtra and so forth.

Furthermore, it [absurdly] follows that the distinction that the absence of the true existence of “I” (nga bden par med pa) is emptiness, but the nonexistence of truly established “I” (bden grub kyi nga med pa) is not emptiness is logically feasible because [according to you] the absence of the true existence of one (gcig bden par med pa) is emptiness, but the nonexistence of truly established one (bden grub kyi gcig med pa) is not emptiness. You have asserted the reason [which is that the absence of the true existence of one (gcig bden par med pa) is emptiness, but the nonexistence of truly established one (bden grub kyi gcig med pa) is not emptiness]. If you accept [that the distinction that the absence of the true existence of “I” (nga bden par med pa) is emptiness, but the nonexistence of truly established “I” (bden grub kyi nga med pa) is not emptiness is logically feasible], it very [absurdly] follows that the view apprehending in thought an “I” qualified with true establishment is not the subtle view of transitory.

---

\[g\] shes rab kyi pha rol tu phyin pa sdud pa tshigs su bcad pa, prajñāpāramitāśaṅcayāgāthā; Peking 735, vol. 21; Tohoku 13, vol. ka (shes rab snags).  

\[h\] The point here is that in Tibetan nga bden par med pa looks as if it means “non-truly-existent I,” which would be an affirming negative; however, it is taken to mean “absence of the true existence of I,” which is a nonaffirming negative and thus a fully qualified emptiness that is the mode of subsistence. (The quote markers around I in the translation are merely for the sake of indicating that the word is not the roman numeral one.)
13. With regard to that, someone says: It follows that the nonproduction of the mode of subsistence is not ascertained with valid cognition by the Proponents of Mind-Only because the nonexistence of truly established production is not ascertained with valid cognition by the Proponents of Mind-Only. You have accepted the reason [which is that the nonexistence of truly established production is not ascertained with valid cognition by the Proponents of Mind-Only]. If you accept [that the nonproduction of the mode of subsistence is not ascertained with valid cognition by the Proponents of Mind-Only], it follows that the Proponents of Mind-Only do not realize with valid cognition that the mode of subsistence is a non-thing because you have accepted [that the nonproduction of the mode of subsistence is not ascertained with valid cognition by the Proponents of Mind-Only].
Our response: [That we assert that the nonproduction of truly established production is not ascertained with valid cognition by the Proponents of Mind-Only] does not entail [that the nonproduction of the mode of subsistence is not ascertained with valid cognition by the Proponents of Mind-Only]. Well then, it [absurdly] follows that the Consequentialists assert a subtler system of non-thing than the assertion by the Proponents of Mind-Only that space is a non-thing because with regard to the measure of establishment of space as [its own] mode of subsistence, the Consequentialists assert a subtler measure of establishment of space as [its own] mode of subsistence than the Proponents of Mind-Only. You have asserted the three spheres [of self-contradiction].

It follows [that with regard to the measure of establishment of space as (its own) mode of subsistence, the Consequentialists assert a subtler measure of establishment of space as (its own) mode of subsistence than the Proponents of Mind-Only] because (1) the Consequentialists assert space’s establishment from its own side as the measure of establishment of space as [its own] mode of subsistence, and (2) nobody from the Autonomists on down asserts such. You have asserted the three spheres [of self-contradiction].
14. With regard to that, someone says: I accept the root [consequence that the Consequentialists assert a subtler system of non-thing than the assertion by the Proponents of Mind-Only that space is a non-thing] because space that is not established from its own side is a non-thing.

Our response: Well then, it [absurdly] follows that in the system of the Consequentialists even in order to realize that a basis [that is, a phenomenon] is a non-thing, it must be qualified by the absence of inherent existence because [according to you] the Consequentialists assert a subtler system of non-thing than the assertion by the Proponents of Mind-Only that space is a non-thing. If you accept [that in the system of the Consequentialists even in order to realize that a basis (that is, a phenomenon) is a non-thing, it must be qualified by the absence of inherent existence], it very [absurdly] follows that even realization that a pot is an [effective] thing must be qualified by the absence of inherent existence! If you accept [that even realization that a pot is an (effective) thing must be qualified by the absence of inherent existence], it would [absurdly] be that no phenomenon is established with valid cognition by anyone except the Consequentialists!
Moreover, it [absurdly] follows that with respect to the assertion by the Proponents of True Existence\(^1\) that the self and the aggregates are the same entity from their own side but different isolates from their own side, there is no fallacy of their having come to assert that the self and the aggregates are both truly established one and truly established different because [according to you] the Proponents of True Existence do not assert, “Although the two, the self and the aggregates, are truly established, [the self and the aggregates] are the two, truly established one and truly established many.”

\[193b\] You have asserted [the entailment, namely that the nonassertion by Proponents of True Existence that “The self and the aggregates are the two, truly established one and truly established many” despite asserting that the two, the self and the aggregates, are truly established] entails [that with respect to the assertion by the Proponents of True Existence that the self and the aggregates are the same entity from its own side, but different isolates from their own side, there is no fallacy of having come to assert that the self and the aggregates are both truly established one and truly established different]. You have come to assert the reason [which is that the Proponents of True Existence do not assert, “Although the two, the self and the aggregates, are truly established, [the self and the aggregates] are the two, truly established one and truly established many.”] It [absurdly]

\(^1\) The Proponents of Mind-Only and below.
follows [that the Proponents of True Existence do not assert, “Although
the two, the self and the aggregates, are truly established, [the self and the
aggregates] are the two, truly established one and truly established many”]
because [according to you] those [Proponents of True Existence] have re-
alyzed that the self and the aggregates are not truly established one. You
have asserted the reason [which is that those Proponents of True Existence
have realized that the self and the aggregates are not truly established one].
It [absurdly] follows [that those Proponents of True Existence have real-
ized that the self and the aggregates are not truly established one] because
[according to you] the non-establishment of the self and the aggregates as
one entity from its own side is not emptiness.

Moreover, it follows that the lack of being truly established one and
many is a correct sign—proving only a convention—that proves that the
self and the aggregates are not truly established because although the
meaning of the absence of true establishment has already been established
in the perspective of awareness by a full-fledged opponent for the proof of
that [that is, for the proof that the self and the aggregates are not truly
established one and many].
established, the lack of being truly established one and many] proves only the terminology and convention of the absence of true establishment in the probandum of the proof of that [that is, in the proof that the self and the aggregates are not truly established].

It follows [that although the meaning of the absence of true establishment has already been established in the perspective of awareness by a full-fledged opponent for the proof of that, that is, for the proof that the self and the aggregates are not truly established, the lack of being truly established one and many proves only the terminology and convention of the absence of true establishment in the probandum of the proof of that, that is, in the proof that the self and the aggregates are not truly established] because although at that time the meaning of the absence of true establishment has been ascertained from the sign, the association of terminology [that is, conceptual consciousness (rtog pa)] thinking with regard to the probandum “These are not truly established” and of the verbal convention “[These] are not truly established” is meaningful,

because, for example, it is like the fact that although the meaning of an ox is established when one sees a sentient corporeal mass with hump and dewlap, the association of the mere terminology “This is an ox” is meaningful for a person who needs to make the terminological connection, because Shāntarakṣhita’s Autocommentary [on the Ornament for the Middle]
No part of the meaning of the thesis exists in this reason because the conventions of knowledge [thinking that this is an ox] and terminology [using the term, “ox”] of the object-possessor are established by the established object [that is, the reason]; for example, this is an ox because of being an entity that is an aggregation of dewlap and so forth.

Since the topics concerning this are difficult points, there appears to be much to be propounded, but having qualms that such would harm the meaning of the general run [of this text], I will leave them aside.

15. Moreover, someone says: Just as although magical illusions appear as horses and elephants, they are empty of those, so although all [phenomena] such as a pot and so forth appear as a pot and so forth, they are empty of a pot and so forth; this emptiness is asserted to be the self-emptiness that is the system of Nāgārjuna.
Our response: Well then, it [absurdly] follows that it does not occur that any phenomenon is itself because [according to you] that whatsoever phenomenon such as a pot and so forth is empty of itself is the meaning of its being like a magical illusion. You have asserted the reason [which is that whatsoever phenomenon such as a pot and so forth is empty of itself is the meaning of its being like a magical illusion]. If you accept [that it does not occur that any phenomenon is itself], it very absurdly follows that the subject, self-emptiness, is not self-emptiness! Tsong-kha-pa’s Explanation of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) Treatise on the Middle”) says:³

Therefore, the significance of applying the example, a magician’s illusion, to the meaning—other phenomena—is not at all that just as a magician’s illusion appears to be a horse or an elephant but is empty of being such, so all [phenomena] such as pots and so forth appear to be pots and so forth, but are empty of being pots and so forth. For, if that were the case, being that phenomenon [for example, being a pot] would not occur, and the application of the example to the meaning would be that [phenomena] appear to be such-and-such but are not the actual thing.

³ Hopkins, Tsong-kha-pa’s Final Exposition of Wisdom, 198.
16. Moreover, someone says: Parts-possessors are to be associated only with the physical.
And several say: Parts-possessors are to be associated only with compounded phenomena.

Our response: These are not logically feasible because it must be treated that there is nothing among all [phenomena]—the compounded such as forms and so forth and the uncompounded such as space, nirvāṇa, and so forth that are not necessarily part-possessors. It follows [that it must be treated that there is nothing among all (phenomena)—the compounded such as forms and so forth and the uncompounded such as space, nirvāṇa, and so forth that are not necessarily part-possessors] because doing it that way is the thought of the father Shāntarakṣhita and the son [Kamalashīla] and of the Supramundane Victor,

because of the explanations of the reasoning of the lack being one and many in:

(1) Shāntarakṣhita’s Autocommentary on the Ornament for the Middle:³

Concerning that, the pervasive are space and so forth. The non-pervasive are gross [objects] and minute particles. Even all of those are indicated¹² as being contradictory

³ Masamichi Ichigō Madhyamakālāṅkāra of Śāntarakṣita: With His Own Commentary or Vyrtti and with the Subcommentary or Pañjikā of Kamalashīla, 44, 64.
¹ Correcting rten in the 2011 TBRC bla brang (194a.6) to bstan in accordance with ibid., 44.
with a unitary nature.

[10.] Because of being related with different factors, How could the pervasive be unitary?

…All uncompounded phenomena such as space and so forth were earlier refuted [as being unitary]. The eighteen constituents are clarified as just being without inherent existence.

(2) [Kamalashīla’s] Commentarial Explanation of Difficult Points in (Shāntarakṣita’s) “Ornament for the Middle”: n

“The unitary” is the partless.

and so forth.

(3) the Descent into Lainā Śūtra:

Just as forms devoid of oneness and otherness

Appear in a mirror, But do not exist there, So is the nature of things.

(4) the Meeting of Father and Son Śūtra, and so forth.

m Correcting bsal in the 2011 TBRC bla brang (194b.1) to gsal in accordance with ibid., 64.

n Ibid., 23.
As Tsong-kha-pa’s *Explanation* [of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’”] says:⁰

Since this treatment is the assertion of the father Shāntarakṣita and his spiritual son [Kamalashīla], reckoning part and whole only for effective things is a flaw of those with small intelligence.

---

2# Our own system

The two, the measure of true establishment and the measure of establishment in conventional terms in this [Autonomy] system, exist because:

- establishment as its own mode of abiding without being only posited through the force of appearing to a non-defective awareness is the measure of true establishment, and
- establishment as only posited through the force of appearing to a non-defective awareness is the measure of conventional establishment, and
- an awareness (1) apprehending [phenomena] as established that way [that is, as established as their own mode of abiding without being only posited through the force of appearing to a non-defective awareness] and (2) not polluted by tenets is an innate conceptual consciousness apprehending true establishment, and

---

since an apprehension of true existence obstructs the suchness\(^p\) of reality as if veiling it with a cloth, it is described as “obscурational” (kun rdzob, samvrti).

The first [part of the reason, which is that establishment as its own mode of abiding without being only posited through the force of appearing to a non-defective awareness] is established because, within having posited as [our hypothetical] basis that a mode of [true] establishment [exists], the opposite of establishment in conventional terms (thsnyad du grub pa) must be taken as true establishment, because of being known from the evidence that the Descent into Laṅkā Sūtra says:q

The production of things [exists] conventionally (kun rdzob tu, samvṛtyā); Ultimately, it lacks inherent existence,

and a Mother Sūtra [a Perfection of Wisdom] says (see above, 105) that forms and so forth exist in conventional terms but do not exist ultimately,

\(^{p}\) That is to say, a consciousness apprehending true existence obstructs the perception of suchness.

\(^{q}\) lang kar gshegs pa'i mdo, laṅkāvatārasūtra, X.429ab; Sanskrit in Bunyiu Nanjio, Laṅkāvatāra Sūtra, 319: bhāvā vidyanti samvṛtyā paramārthe na bhāvakāh.
because Tsong-kha-pa’s Explanation [of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’”] (see above, 81) says:

A clear identification of the object of negation does not emerge in other reliable sourcebooks of the Autonomy School, but the existence that is the opposite of the mode of conventional existence described in Kamalashīla’s Illumination of the Middle is to be known as ultimate or true existence.

The second [part of the reason which is that establishment as only posited through the force of appearing to a non-defective awareness is the measure of conventional establishment] is established because that the “convention” (kun rdzob) in “conventional establishment” and the “conventional terms” (thasnyad) in “establishment in conventional terms” must be something not harmed by valid cognition with respect to the meaning of its own object of comprehension is taken as that [measure of conventional establishment].

[That the “convention” (kun rdzob) in “conventional establishment” and the “conventional terms” (thasnyad) in “establishment in conventional terms” must be something not harmed by valid cognition with respect to the meaning of its own object of comprehension is taken as that}
The Object of Negation in the Autonomy School

(measure of conventional establishment) follows because the convention (kun rdzob, samvrti) in this [conventional establishment (kun rdzob tu grub pa)] is not the obscurer (kun rdzob, samvrti) that is an apprehension of true existence (bden ’dzin) [in obscurational truth (kun rdzob bden pa, samvrtisattya)], because the Descent into Laṅkā Sūtra says, “The production of things [exists] conventionally,” and in explaining the meaning of this Kamalashīla’s Illumination of the Middle says:

Therefore, all entities of false things are said “to merely exist conventionally” through the power of their mentations,

and Tsong-kha-pa’s Explanation [of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’”] (see above, 85) says:

The “mentations” of those living beings are not just conceptual consciousnesses but also are to be taken as non-conceptual consciousnesses.

False things—that is to say, that do not exist ultimately but are posited as existing through the force of those two [conceptual and non-conceptual consciousnesses]—exist only conventionally. This is the meaning of the statement in the [Descent into Laṅkā Sūtra], “The production of things [exists] conventionally (kun rdzob tu, samvṛtyā).” Moreover, this does not mean that [such falsities] exist conventionally in the sense of existing for a samvṛti (kun rdzob) that is an apprehender of true existence. [Rather, they exist for a samvṛti (kun rdzob) that is a conventional valid consciousness.]

Adapting Hopkins’ “thoughts” to “mentations.”
The third [part of the reason which is that an awareness (1) apprehending phenomena as being established in that way—that is, as being established as their own mode of abiding without being only posited through the force of appearing to a non-defective awareness—and (2) not polluted by tenets is an innate conceptual consciousness apprehending true existence] is established because since [an awareness mistaken that way (that is, apprehending phenomena as established as their own mode of abiding without being only posited through the force of appearing to a non-defective awareness) has arisen from beginningless time, it is innate, and since apprehending true existence is not feasible in a sense consciousness, it must be a conceptual consciousness.

That [(an awareness) mistaken that way (that is, apprehending phenomena as established as their own mode of abiding without being only posited through the force of appearing to a non-defective awareness) has arisen from beginningless time, it is innate, and since apprehending true existence is not feasible in a sense consciousness, it must be a conceptual consciousness] follows because if apprehension of true existence existed in sense consciousnesses, there would have to be a common locus of sense consciousness and obstruction, whereas the means binding [beings] in cyclic existence is not suitable in a sense consciousness according to Khay-drub’s *Compilation on Emptiness*, because:
The Descent into Laṅkā Śūtra (see above, 82) says:\[^8\]

That [consciousness] mistaken with regard to the lack of inherent existence
[Is asserted as the obscurer of reality (yang dag kun rdzob, satyaṃ sanvṛti ).]

and regarding its time of mistake and mode of mistake Kamalashīla’s Illumination of the Middle (see above, 82) also says:

Moreover, that [obscurer] arises through the power of thorough maturation of beginningless predispositions for mistake, and it sees things displayed as if they had an inherent nature in reality.\[^1\]

and Tsong-kha-pa’s Explanation [of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’”] (see above, 85) says:

The passage “Moreover, that [obscurer (sanvṛti)] arises through the power of thorough maturation of beginningless predispositions for mistake” indicates that this apprehension of true existence is innate.

and so forth.

\[^8\] Jam-yang-shay-pa cites only the first line; the second is added for the sake of context.

\[^1\] Alternative translation: Due to that [obscurer, all living beings] see [things] displayed as if they had an inherent nature in reality.
For, the Descent into Lankā Sūtra (see above, 82) says:

[That (consciousness) mistaken with regard to the lack of inherent existence]
Is asserted as the obscurer of reality (yang dag kun rdzob, satyam samvṛti).

and regarding its meaning Kamalāśīla’s Illumination of the Middle (see above, 82) says:

A mistaken awareness that superimposes—on things that in reality [or ultimately] are natureless—an aspect opposite to that [naturelessness] is called an “obscurer” (kun rdzob, samvṛti) because it obstructs [itself] from [perception of] suchness or because it veils [other awarenesses] from perception of suchness.

and Tsong-kha-pa’s Explanation [of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’”] (see above, 84) says:

The passage “A mistaken awareness that superimposes—on things that in reality [or ultimately] are natureless—an aspect opposite to that [naturelessness]” refers to [a consciousness] mistaking what does not ultimately exist inherently to exist ultimately.

This was cited earlier (see above, 85) slightly differently as:

Jam-yang-shay-pa cites only the first line; the second is added for the sake of context.
The passage “...is called an ‘obscurer’ (kun rdzob, samvrti) because it obstructs [itself] from [perception of] suchness or because it veils [other awarenesses] from perception of suchness” is the meaning of “the obscurer of reality (yang dag kun rdzob, satyaṃ samvṛti)” [in the quote from the Descent into Lāṅkā Sūtra]. Samvṛti [here] is taken as [meaning] “obstructor” (sgrib byed), obstructing reality.

The remainder has already been explained.
The first [those whose eyes have been affected by the mantra the magician has cast and sentient beings who have not realized emptiness] are similar because:

1. those whose eyes have been affected [by the mantra the magician has cast] do not accept that a magic horse or elephant appears due to a mistaken awareness but apprehend [the basis of conjuring (sprul gzhi) such as a pebble or twig] as an objective horse or elephant

2. and the dawning—to those who have not realized emptiness—of all phenomena in the manner of an objective mode of abiding without dawning as posited through appearing to an awareness are similar.

The second [the magician and persons who have realized the view of emptiness] are similar because just as, in the example [of an illusory horse or elephant], although that [basis of conjuring] appears to that [magician] as that [horse or elephant, the magician] thinks it is due to [his] awareness, those who have realized the view also realize that appearances [of all phenomena] that way [that is, as established in an objective mode of abiding without being posited through appearing to an awareness] are nothing more than only posited through the force of mistaken awareness.

\(^a\) Correcting “unmistaken” (ma 'khrul ba) in the 2011 TBRC bla brang (196a.3) to “mistaken” ('khrul ba) in accordance with parallelism with the example in which the magician knows that the appearance of a horse or elephant is due to his mantra that has affected even
The third [that is, those whose eyes are not polluted and Bodhisattva Superiors in meditative equipoise] are established [as similar] because just as, in the example, [those whose eyes are not affected by the mantra] do not have any appearance or conception [of a horse or elephant], in what is exemplified both the appearance of true existence and conception of true existence do not exist in the perspective of meditative equipoise of those [Bodhisattva Superiors].

There are means of comprehending appearances of magic horses and elephants because:

- according to Yogic Middle Way Proponents (rnal 'byor spyod pa'i dbu ma pa, yogācāra-mādhyamika), since magic horses and elephants are appearance-factors of the mind, they are implicitly realized by self-cognitions comprehending them, whereby [appearances of magic

his own eye consciousness and made it mistaken. As Tsong-kha-pa says in the passage cited above (90): (emphasis mine)

Therefore, that the basis of conjuring can be posited as appearing as a horse or elephant is, according to the magician, through the force of appearing that way to a mistaken awareness; it is not posited otherwise through the force of the mode of abiding of the basis of conjuring itself.
horses and elephants] are established [that is, certified] by self-cogniz-
ing direct perceptions

- according to Sūtra Middle Way Proponents (mdo sde spyod pa'i dbu
ma pa, sautrāntika-mādhyamika), since magic horses and elephants
are external objects and imputed form sense-spheres, [appearances of
magic horses and elephants] are established [that is, certified] by sense
direct perceptions apprehending either the area [on which the illusion
appears] or intermediate space [in which it appears].

Tsong-kha-pa’s Explanation [of Chandrakīrti’s Entry to (Nāgārjuna’s)
“Treatise on the Middle”] (see above, 92) says:

According to the Yogic Middle Way [Autonomists, who do not
assert external objects], the appearance of such an illusion is es-
established [that is, certified] by a self-knowing direct perception,
and according to [Sūtra Middle Way Autonomists], who assert ex-
ternal objects, the appearance of such an illusion is establish ed
[that is, certified] by a sense direct perception apprehending the
basis—for instance, the area [on which the illusion appears] or in-
termediate space [in which it appears].

This will be explained below.
3# Dispelling objections [to our own system]

17. Someone says: It follows that the subjects, the horns of a rabbit, exist because of being established in conventional terms and conventionally. It follows [that the subject, the horns of a rabbit, are established in conventional terms and conventionally established] because of being established as only posited through the force of an awareness.

Our response: [Whatever is established as only posited through the force of an awareness is] not necessarily [established in conventional terms and conventionally established].

18. With regard to that, someone says: Well then, it follows that all phenomena are only posited through the force of an awareness because [whatever is established as only posited through the force of an awareness] is not necessarily [established in conventional terms and conventionally established]. If you accept [that all phenomena are only posited through the force of an awareness], it follows that [all phenomena] are not established from their own side because you accept [that all phenomena are only posited through the force of an awareness].
Our response: [That all phenomena are only posited through the force of an awareness] does not entail [that all phenomena are not established from their own side] because although these [Autonomists] do not accept that [all phenomena] are established from their own side without being posited through the force of an awareness, being posited in that way—[that is, only posited through the force of an awareness]—does not contradict being established by way of their own character.

19. With regard to this, someone says: The subjects, all phenomena, are only posited through the force of appearing to a conceptual consciousness because that both conceptual and non-conceptual consciousnesses exist in the “awareness” in “[through the force] of appearing to an awareness” is the meaning of “through the power of those [living beings’] mentations.” If you accept [that all phenomena are only posited through the force of appearing to a conceptual consciousness], it follows [that all phenomena are only imputed by a conceptual consciousness] because of being only posited through the force of appearing to a conceptual consciousness.
Our response: [Being only posited through the force of appearing to a conceptual consciousness] does not entail [being only imputed by a conceptual consciousness] because the meaning of those two [being only posited through the force of appearing to a conceptual consciousness and being only imputed by a conceptual consciousness] are different. It follows [that the meaning of those two, being only posited through the force of appearing to a conceptual consciousness and being only imputed by a conceptual consciousness, are different] because an object posited through the force of appearing to a non-defective conceptual consciousness requires that the object exist in the mode of abiding in accordance with how it is apprehended by that [non-defective conceptual consciousness], but due to the phrase “only imputed by a conceptual consciousness” [an object only imputed by a conceptual consciousness] requires [an object] not in accordance with the mode of abiding superimposed by this [conceptual consciousness].

It follows [that an object posited through the force of appearing to a non-defective conceptual consciousness requires that the object exist in the mode of abiding in accordance with how it is apprehended by that (non-defective conceptual consciousness), but due to the phrase “only imputed by a conceptual consciousness” (an object only imputed by a conceptual consciousness) requires (an object) not in accordance with the
mode of abiding superimposed by this (conceptual consciousness)] because the meanings of “Through the force of an awareness or a conceptual consciousness” and “Through the force of appearing to them” are similar, because Tsong-kha-pa’s Explanation [of Chandrakīrti’s “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’”] says:

Since this is the case, [in the Autonomy School] “to exist in the manner of an objective mode of abiding without being posited through appearing to an awareness, or through the force of an awareness”

20. Also, someone says: It follows that even the Proponents of True Existence realize that the two, specifically characterized and generally characterized phenomena such as forms and so forth, are conventionally established because those [Proponents of True Existence] know to posit the two objects of comprehension through the force of the two valid cognitions [direct perception and inference], and the two valid cognitions are non-defective awarenesses.

---

a Hopkins, Tsong-kha-pa’s Final Exposition of Wisdom, 192; Tibetan: Tsong-kha-pa, dbu ma dgongs pa rab gsal, 131.

b Tsong-kha-pa finishes the sentence with, “is to truly exist, to ultimately exist, and to exist as [the object’s own] reality, and apprehending such is an innate apprehension of true existence.”

c The two types of objects of comprehension are specifically and generally characterized objects, or impermanent and permanent objects, or manifest and hidden objects.
Our response: [That those (Proponents of True Existence) know to posit the two objects of comprehension through the force of the two valid cognitions, and that the two valid cognitions are non-defective awarenesses] does not entail [that even the Proponents of the True Existence realize that the two, specifically characterized and generally characterized phenomena such as forms and so forth, are conventionally established]:

- because the meanings understood by these two [(1) posited through the force of appearing to a non-defective awareness and (2) posited through the force of valid cognition] are utterly different,
- because these [Proponents of True Existence] accept that [forms and so forth] appearance to a non-defective awareness itself as the mode of abiding of those objects and accept (1) that there is nothing more than [forms and so forth] being posited over there through the force of appearing [to a non-defective awareness] and (2) that the comprehension of the mode of abiding of objects of comprehension by the two valid cognitions is the positing of objects of comprehension,
- because Tsong-kha-pa’s Explanation of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’” (see above, 91) says:

> When a basis [that is, an object] appears in a certain way, there are two [types]—those that do and do not correspond with the mode of subsistence in accordance with how it appears. When you differentiate well this [presentation of how phenomena are posited through the force of awarenesses according to the Autonomy School], you will come to differentiate the two positions [of the Autonomy School and the Proponents of True Existence which some] confuse. They think:

Objects of comprehension [that is, all objects] are posited through the force of valid cognitions, and since valid cognitions are awarenesses, the positing of objects of comprehension through them is a case of positing [objects] through the force of

---

\(^d\) Adapted from Hopkins, *Tsong-kha-pa’s Final Exposition of Wisdom*, 196; Tibetan: Tsong-kha-pa, *dbu ma dgongs pa rab gsal*, 133.
an awareness. Hence, even the systems of the Proponents of True Existence refute true establishment.

[However,] that objects of comprehension are posited [that is, certified] through the force of valid cognitions means that valid cognitions realize the mode of abiding of the two [types of] objects of comprehension.

21. Also, someone says: It follows that the objects of negation in the two, the Autonomy School and the Consequence School, do not differ in
coarseness and subtlety because (1) with regard to the nonexistence of inherent nature both [the Autonomy School and the Consequence School] assert in that way and (2) if something more subtle than that were negated, one would fall to an extreme of annihilation. The first [part of the reason, which is that with regard to the nonexistence of inherent nature both (the Autonomy School and the Consequence School) assert in that way] follows because Shāntarakṣhita’s Ornament for the Middle and his Autocommentary say,5 “inherent nature does not exist,” and Kamalashila’s Commentarial Explanation [of (Shāntarakṣhita’s) “Ornament for the Middle’] and his Illumination of the Middle and so forth very many times speak of “nonexistence of inherent nature.”

Our response: [The above citations] do not entail [that with regard to the nonexistence of inherent nature both the Autonomy School and the Consequence School assert in that way] because although you are right that there are many in that way with respect to the words, in fact when analyzed well, there are distinctions of utter dissimilarity in mental perspective. It follows [that although you are right that there are many in that way with respect to the words, in fact when analyzed well, there are distinctions of utter dissimilarity in mental perspective] because (1) these [Autonomists] assert that forms and so forth are established as they appear to children and above, whereas (2) Consequentialists take establishment that way [that is, establishment in accordance with appearance] as an object of negation.

5 Masamichi Ichigō Madhyamakālaṅkāra of Śāntarakṣita: With His Own Commentary or Vṛtti and with the Subcommentary or Pañjikā of Kamalashila, 22-23
The first reason which is that these [Autonomists] assert that forms and so forth are established as they appear to children and above] is established because:

(1) Shāntarakṣhita’s *Autocommentary of the Ornament for the Middle* says:\(^a\)

> **We do not negate inherent natures—coming to mind within sole non-examination—that are experienced ranging from the states of childish beings through to omniscient pristine wisdom.**

(2) and Jñānagarbha’s *Differentiation of the Two Truths* (22ab) says:\(^b\)

> **Make an explanation why From this cause that appears.**

and Jñānagarbha’s *Autocommentary [on the “Differentiation of the Two Truths”]* on that says:

> **Well, if [things] are only not ultimately produced at all, then why from this cause and so forth, in answer to which his *Autocommentary* (22cd) says:**\(^c\)

A response to this is returned:\(^d\)

---

\(^a\) Ibid., 220.

\(^c\) Ibid., 175-176.

\(^d\) For lon (2011 bla brang, 197b.4) Jñānagarbha’s autocommentary, ibid., 175, reads glon.
This such appears from this cause.
What [more] should be said!
If as much as appears to you also appears to us, what is be asked about that! Even if asked, we would say just that. We would not say anything not experienced before.

(3) and also Jñānagarbha’s *Differentiation of the Two Truths* (28) says: a

That which is an entity of appearance
Is just not to be negated.
It is not at all logically feasible
To negate whatever is experienced.

and Jñānagarbha’s *Autocommentary [on the “Differentiation of the Two Truths”]* on that says: b

The thinking is that “It would contradict direct perception.”

(4) and [that Autonomists assert that forms and so forth are established as they appear to children and above] is known by Bhāvaviveka’s refutation that imputational natures [that is, imputational natures] are not established by way of their own character, and so forth. c

In Bhāvaviveka’s refutation—in the twenty-fifth chapter of his *Lamp for (Nāgārjuna’s) Wisdom,* *Commentary on the “Treatise on the Middle”—of the Mind-Only School’s presentation of character-non-nature with regard to imputational natures, he states that if imputational natures are said to be character-non-natures, this would involve a deprecation of imputational natures. Here, “character-nature” is taken as meaning establishment by way of their own character; thus, Bhāvaviveka seems to be indicating that, for him, all phenomena—even existent imputational natures—are established by way of their own character. Tsong-kha-pa’s *The Essence of Eloquence* addresses this point in detail in the chapter on the Autonomy School.

---

a Ibid., 181.
b Ibid.
c As Hopkins says in *Where Is the Middle? Two Views of Reality in the Middle Way: The Autonomy and Consequence Schools,* Part Five: The Other Evidence (unpublished manuscript, 393):

In Bhāvaviveka’s refutation—in the twenty-fifth chapter of his *Lamp for (Nāgārjuna’s) Wisdom,* *Commentary on the “Treatise on the Middle”—of the Mind-Only School’s presentation of character-non-nature with regard to imputational natures, he states that if imputational natures are said to be character-non-natures, this would involve a deprecation of imputational natures. Here, “character-nature” is taken as meaning establishment by way of their own character; thus, Bhāvaviveka seems to be indicating that, for him, all phenomena—even existent imputational natures—are established by way of their own character. Tsong-kha-pa’s *The Essence of Eloquence* addresses this point in detail in the chapter on the Autonomy School.
The second reason [which is that Consequentialists take establishment that way (that is, establishment in accordance with appearance) as an object of negation] is established because of very many [reasons] such as the evidence for the nonexistence of commonly appearing subjects because:

Tsong-kha-pa’s *The Essence of Eloquence* says:\(^a\)

---

\(^a\) From the chapter on the Consequence School in a section titled “How those reasonings refute establishment by way of [the object’s] own character.” Tibetan: Tsong kha pa blo bzang grags pa, *A Study of Tsong Khapa’s Mādhyamika Philosophy II: Annotated Japanese translation of the Mādhyamika Section of Essence of the Good Explanations (Legs bṣad shis kyi po, ツォンカパ中観哲學の研究 II)*, tr. by Tsultrim Kelsang Khangkar and Katano
Autonomists assert that the non-defective consciousnesses that posit [phenomena] as existing in conventional terms are non-mistaken with regard to an object established by way of its own character, the appearing object or the conceived object; however, in this [Consequentialist system] there are many [cases of consciousnesses] mistaken with respect to the appearing object that are able to posit objects. Therefore, these two [the Autonomists and the Consequentialists] differ greatly also with respect to whether consciousnesses are defective or not.

This is the thought of the statement in Chandrakīrti’s *Commentary on (Aryadeva’s) “Four Hundred Stanzas on the Yogic Deeds of Bodhisattvas,”* a “because a thing that abides in one aspect appears in another aspect.”

Therefore, it follows that although there are many similar phrases among the two, the Autonomists and the Consequentialists, the meaning...
of those [phrases] vary greatly in mental perspective because there are many cases where though the words are similar, the meanings differ such as “happily going along without analysis,” “without analysis, existent; but if analyzed, nonexistent,” “posited through the force of awareness,” “posited by names and terminology,” and so forth because:

Tsong-kha-pa’s *Explanation [of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’”]* (see above, 98) says:¹

Hence, the objects of negation in the two Middle Way Schools come to differ greatly with regard to the perspective of the awareness [in the face of which objects are posited].²

and Tsong-kha-pa’s *The Essence of Eloquence* says:³

Middle Way Autonomists are unable to posit forms, feelings, and so forth through the force of an awareness imputing conventions; rather, they assert that they are able to posit [forms, feelings, and so forth as] existent in conventional terms⁴ through the force of appearing to non-defective sense consciousnesses and so forth. Hence, the awareness through the force of which [phenomena] are posited or are not posited also differs greatly [between the Consequentialists and the Autonomists. Autonomists] assert that analysis of whether [something] exists or not and so forth through the force of the phenomenon’s own mode of subsistence from its own side without being posited through the force of such an awareness comes from that [boundary] to be analysis of whether it is established as [its own] suchness or not; they do not assert that it is merely from the mode of analysis described earlier. Therefore, in conventional terms they assert establishment by way of [the object’s] own character. Hence, they also differ [from the Consequentialists] with respect to what is eliminated by the term “only” in the statements in high sayings that conventionalities are name-

---

¹ Tsong-kha-pa, *dbu ma dgongs pa rab gsal*, 136.
² For the Autonomists the awareness is any consciousness, either conceptual or non-conceptual, not affected by superficial causes of mistake, whereas for the Consequentialists it must be only conceptual since everything is only imputedly existent.
³ From the chapter on the Consequence School in a section titled “Upon indicating the mode of apprehension by artificial and innate superimposition, showing that it does not exist.” Tibetan: Tsong kha pa blo bzang grags pa, *A Study of Tsong khapa’s Mādhyamika Philosophy II*, 94.
⁴ Correcting *tha snyad tu* in 2011 TBRC bla brang (198a.6) to *tha snyad du* in accordance with euphonic rules.
The Object of Negation in the Autonomy School

only, only terminological, and only imputed.

22. With regard to this, someone says: It follows that it is logically feasible that although [both Autonomists and Consequentialists say that phenomena] exist [as] only posited by names and terminology, Autonomists and Consequentialists differ with regard to what is eliminated by the term “only” because (1) that passage in Tsong-kha-pa’s The Essence of Eloquence says this, a and (2) these [Autonomists assert that phenomena] exist

a That is, when Tsong-kha-pa, just above, says:
[as] only posited [by names and terminology] within taking non-defective awareness as “terminology.”

*Our response:* The way [that (1) that passage in Tsong-kha-pa’s *The Essence of Eloquence* says this, and (2) these (Autonomists assert that phenomena) exist (as) only posited (by names and terminology) within taking non-defective awareness as “terminology”] does not entail [that it is logically feasible that although (both Autonomists and Consequentialists agree that phenomena) exist (as) only posited by names and terminology, Autonomists and Consequentialists differ with regard to what is eliminated by the term “only”] has already been explained earlier (see the response in the debate above on 124).

Hence, they also differ [from the Consequentialists] with respect to what is eliminated by the term “only” in the statements in high sayings that conventionalities are name-only, only terminological, and only imputed.

3. Other Works

Hopkins, Jeffrey. *Emptiness in the Autonomy School of Buddhism*. Unpublished manuscript.

Jongbok Yi is Assistant Professor of Asian Philosophy at the Richard Stockton College of New Jersey. He received a B.A. from Sunkyunkwan University in 1997 and received a M.A. from Seoul National University in 2000 in Seoul, South Korea. He studied Indian and Tibetan Buddhism with Professor Emeritus Jeffrey Hopkins and Professor David Germano since 2002 at the University of Virginia and received M.A. in 2005 and Ph.D. in 2013. The title of his dissertation is “Monastic Pedagogy on Emptiness in the Geluk Sect of Tibetan Buddhism: Intellectual History and Analysis of Topics Concerning Ignorance According to Svātantrika-Mādhyamika in Monastic Textbooks by Jam-yang-shay-pa.” He has translated several books including Stages of Meditation and Mind of Clear Light: Advice on Living Well and Dying Consciously by His Holiness the 14th Dalai Lama, etc., into Korean. He is currently teaching at the Richard Stockton College of New Jersey since 2013 and is also a translator of the UMA Institute for Tibetan Studies.
The Opposite of Emptiness in the Middle Way Autonomy School

This book provides an analyzed translation of part of Jam-yang-shay-pa’s *Decisive Analysis of the Middle*, also called *Great Exposition of the Middle*, which came to be the normative textbook for the study of Chandrakīrti’s Middle Way treatise in the Go-mang College of Dre-pung Monastery. Translated here is the section on what is negated in the doctrine of emptiness in general in the Middle Way School and in the Autonomy School in particular. Tsong-kha-pa Lo-sang-drag-pa, the founder of the Ge-lug tradition, emphasized what is rejected in the view of emptiness since without clearly identifying what veils realization of emptiness one cannot achieve liberation.

This book provides the first translation of this section of Jam-yang-shay-pa’s *Decisive Analysis of (Chandrakīrti’s) “Supplement to (Nāgārjuna’s) Treatise on the Middle”*: Treasury of Scripture and Reasoning, Thoroughly Illuminating the Profound Meaning [of Emptiness], Entrance for the Fortunate, with Tibetan text interspersed. It is divided into two parts. The initial part:

1. justifies the necessity of identifying the object of negation
2. introduces the two different ways of discerning the two types of objects of negation
3. provides the criteria and subdivisions of the objects to be negated by correct reasonings
4. clarifies easily confused logical terms.

The second part concerns the exaggerated status of phenomena that is negated in the Middle Way Autonomy School. Jam-yang-shay-pa’s presentation centers on how Tsong-kha-pa creatively expands on a statement in Kamalashīla’s *Illumination of the Middle* so it clearly identifies true existence or ultimate existence in terms of the innate apprehension of true existence as the central object of negation. Tsong-kha-pa does this through finding a supposedly clear exposition in Kamalashīla’s text of conventional existence and then drawing out its counterpart, ultimate existence.
